

Agent Zero Commander Cutover Report

Generated: 2026-05-03T21:52:46.697Z

Decision

Status: PARTIAL GO / Production Reload Blocked.

Agent Zero is now the committed commander in Mission Control source, the freshly built Mission Control standalone bundle, and the ClaudeClaw owner transport. ClaudeClaw has been restarted and now routes the active owner governance identity and voice path to Agent Zero. Production Mission Control still needs an admin-authorized restart before the long-running web service reflects the newest Mission Control bundle.

Commander Status

- Agent Zero: active commander in Mission Control registry/source and ClaudeClaw owner transport.
- Hermes: lieutenant / skill and workflow specialist; service is active, but production execution remains read-only/degraded until live chat and Bridge Session proof are complete.
- Tony: retired/archived. Tony Legacy remains only for rollback, historical audit, and explicit legacy diagnostics.

Agent Zero Voice Status

- ElevenLabs Agent Zero voice support was configured and pushed in ClaudeClaw.
- Voice commit pushed: `a4ec5dfb28cd4771541392256c86d0048b047071`.
- Active voice ownership transfer pushed: `db981fc37fcd36ca53f49c837b79f6bd324cfb47`.
- Owner-channel cutover pushed: `820b8cad9b909352150a74e7dbc6853659263857`.
- Telegram/voice now uses Agent Zero when the owner route reaches the active ClaudeClaw service.
- The Telegram bot username itself was not renamed; that requires external Telegram/BotFather owner action.

Mission Control Push Status

Pushed Mission Control commits:

- `c4604310439edb5c403084ec0935c62075c55841` — promote Agent Zero as ecosystem commander.
- `9f0411286b89ef391d3f9317452940450f80a944` — promote Agent Zero / retire Tony hierarchy.
- `ea49a3ab64315eb394ebf044e9a9d6f792710486` — hierarchy cutover report.

Mission Control branch `to-knowledge-mc` is not ahead of remote. Remaining Mission Control dirty entries are old untracked parked artifacts.

ClaudeClaw Push Status

Pushed ClaudeClaw commits:

- `a4ec5dfb28cd4771541392256c86d0048b047071` — Agent Zero ElevenLabs voice.
- `db981fc37fcd36ca53f49c837b79f6bd324cfb47` — active voice ownership transferred to Agent Zero.
- `820b8cad9b909352150a74e7dbc6853659263857` — owner command channel routes to Agent Zero.

ClaudeClaw branch `master` is not ahead of remote. Remaining ClaudeClaw dirty entries are pre-existing parked runtime deletions/untracked artifacts and were not staged.

Brain / Knowledge Status

- Brain Sync source and fresh Mission Control build show Agent Zero as the primary brain operator.
- Obsidian, MemPalace, Graphify, Brain Sync, and Build-Wiki/Farmer are represented as knowledge/brain systems under Agent Zero.
- Build-Wiki/OpenCloud infrastructure is still retained; destruction is **not safe** yet because dependency replacement proof is incomplete.

Live Query / Production Status

- Fresh Mission Control standalone smoke passed on a temporary local server.
- Production `mission-control.service` is active but still blocked from restart by interactive admin auth.
- ClaudeClaw service was restarted successfully and is active.
- Agent Zero container is running.
- Hermes gateway service is active.

Admin-blocked restart output:

```
Failed to restart mission-control.service: Interactive authentication required.
```

Tests Passed

Mission Control:

- `git diff --check`
- `pnpm run typecheck`
- `pnpm run build`
- `pnpm test`: 94 test files, 993 tests passed
- Agent Zero full ecosystem gauntlet: 10,000 deterministic scenarios, 0 failures
- Fresh standalone route smoke: providers/capability matrix/Hermes/Brain Sync authenticated routes passed; unauthenticated route returned 401

ClaudeClaw:

- `git diff --check`

- ``npm run typecheck``
- ``npm run build``
- ``npm test``: 60 test files, 1208 tests passed, 4 skipped
- ClaudeClaw 100,000-scenario ecosystem gauntlet: 0 hard-fail leaks
- ``npm run design-lock:verify``

Service Status

- ``mission-control.service``: active, restart blocked by admin authorization.
- ``claudeclaw.service``: active after restart.
- ``opencloud-docs-farmer.timer``: active.
- ``hermes-gateway.service``: active.
- Docker ``agent-zero``: running.

Secrets Verification

No ``.env`` file was modified or staged. No API keys, voice provider secrets, Mission Control keys, or Agent Zero API keys were printed or committed. Secret scans passed for staged diffs and pushed commit diffs.

Where Tony Still Exists

- Historical reports, tests, legacy class names, old compatibility labels, and archived rollback/audit data may still contain Tony references.
- Tony is not the active Mission Control commander in the committed source/fresh build.
- ClaudeClaw DB status shows Tony as retired and Agent Zero as active.
- Tony code/data was not deleted; it remains for rollback and dependency mapping.

Remaining Blockers

1. Admin-authorized restart of ``mission-control.service`` is required for production web UI to load the latest Agent Zero hierarchy bundle.
2. Live owner Telegram validation still requires the owner to send the acceptance phrase/message.
3. Hermes must pass live chat/API and Bridge Session execution proof before it can move beyond lieutenant read-only/degraded.
4. OpenCloud/Build-Wiki cannot be destroyed until Agent Zero replacement coverage and rollback are proven.

Rollback Commands

Mission Control:

```
cd /home/tony/mission-control && git revert ea49a3ab64315eb394ebf044e9a9d6f792710486  
9f0411286b89ef391d3f9317452940450f80a944 c4604310439edb5c403084ec0935c62075c55841 &&  
git push
```

ClaudeClaw:

```
cd /home/tony/claudeclaw && git revert 820b8cad9b909352150a74e7dbc6853659263857  
db981fc37fcd36ca53f49c837b79f6bd324cfb47 a4ec5dfb28cd4771541392256c86d0048b047071 &&  
git push && systemctl --user restart claudeclaw.service
```

If Mission Control is restarted after this report and rollback is needed, restart `mission-control.service` again after reverting so the production process reloads the reverted bundle.
