

Day 59 - OneDrive Readiness Closure

Date: 2026-05-10

Lane: OneDrive readiness

Status: CREDENTIAL_GATED / BACKEND_MISSING proof harness complete

Branch: to-knowledge-mc

Objective

Close the developer-side OneDrive readiness lane without fake uploads.

Scope

The lane verifies that OneDrive status and upload proof remain Bridge-gated, require provider auth and a target folder, never expose credentials or raw local paths, and never claim upload unless a real adapter verifies it.

Implementation

Updated OneDrive delivery readiness behavior:

- Status now exposes canonical 'canonical_status' and 'blocker_class'.
- Status now exposes 'required_scope: onedrive.upload'.
- Status declares 'target_folder_required: true'.
- Status reports whether target folder configuration exists.
- Status reports credential presence as yes/no only through safe key names, never values.
- Blocked upload results now include 'required_scope', 'target_folder_required', 'target_folder_configured', and 'no_upload_performed: true'.
- Added runtime guard script: 'scripts/check-onedrive-readiness-guard.mjs'.

Files Changed

- 'src/lib/agent-zero-onedrive-delivery.ts'
- 'src/lib/agent-zero-onedrive-delivery.test.ts'
- 'scripts/check-onedrive-readiness-guard.mjs'

UI Behavior

No fake upload state is introduced. The UI must continue showing OneDrive as gated/blocked until :

- Bridge Session scope exists for 'onedrive.upload'.
- OneDrive/Microsoft Graph auth is present.
- Target folder is configured.
- A real provider upload/list runner verifies the operation.

Tests

TDD red test confirmed missing OneDrive canonical/scope fields before implementation.

Focused adapter tests:

- 'src/lib/agent-zero-onedrive-delivery.test.ts': passed, 3 tests.

Script syntax:

- 'node --check scripts/check-onedrive-readiness-guard.mjs': passed.

Validation:

- 'git diff --check': passed.
- 'pnpm run typecheck': passed.

- 'pnpm run build': passed.
- '.env' diff check: no diff.

Runtime proof on '127.0.0.1:3337':

- 'scripts/check-onedrive-readiness-guard.mjs': passed.
- '/login' returned 200 after restart.
- Authenticated status returned 'CREDENTIAL_GATED'.
- Blocker: 'onedrive_credential_required'.
- Upload proof returned HTTP 423.
- Upload proof included 'required_scope: onedrive.upload'.
- Upload proof included 'no_upload_performed: true'.
- No fake upload, no fake done, no token exposure.

External Writes

No OneDrive upload was attempted.
No external write occurred.
No token or OAuth secret was printed.

Blocker Classification

CREDENTIAL_GATED / BACKEND_MISSING:

- OneDrive OAuth/Microsoft Graph/provider execution is not proven in the current runtime.
- Upload remains blocked until approved Bridge scope and provider adapter proof are present.

Rollback

After commit:

'git revert <day_59_onedrive_commit_sha>'
