Day 60 - OneDrive Proof Closure

Date: 2026-05-10

Lane: OneDrive proof

Status: CREDENTIAL_GATED / BACKEND_MISSING proof harness complete

Branch: to-knowledge-mc

Objective

Attempt OneDrive proof without fake upload claims. Since the runtime has no proven OneDrive credential/provider upload adapter, this day closes as gated with a live proof harness and exact blockers.

Runtime Proof

Runtime: '127.0.0.1:3337'

Command:

'scripts/check-onedrive-readiness-guard.mjs'

Result:

- Guard status: passed.
- Unauthenticated status route returned 401.
- Authenticated status route returned 200.
- Canonical status: 'CREDENTIAL_GATED'.
- Blocker class: 'CREDENTIAL_GATED'.
- Blocker: 'onedrive_credential_required'.
- Required scope: 'onedrive.upload'.
- Target folder required: true.
- Target folder configured: false for status.
- Upload route returned 423.
- Upload accepted for execution: false.
- Upload route included 'no_upload_performed: true'.
- No fake upload.
- No fake done.
- No token exposure.
- No raw local path exposure.

Files Changed

- 'runtime/day-60-onedrive-proof-guard-smoke.json'
- 'runtime/day-60-onedrive-proof-closure.md'
- 'runtime/day-60-onedrive-proof-closure.pdf'

External Writes

No OneDrive upload was attempted.

No external write occurred.

No Zapier write occurred.

No SMB/Fork 2 action occurred.

Completion Decision

Day 60 developer-side closure is complete as gated:

- Implementation and proof harness exist from Day 59.
- Runtime proof confirms exact blockers.
- No fake upload occurred.

Blocker Classification

CREDENTIAL_GATED / BACKEND_MISSING:

- OneDrive OAuth/Microsoft Graph credential is not present in runtime.
- OneDrive provider upload adapter is not configured/proven.
- A scoped Bridge Session remains required for any future upload.

Owner/Admin Action

To move OneDrive from gated to live proof:

1. Configure approved OneDrive/Microsoft Graph credential through the sanctioned auth path.
2. Configure a target report folder.
3. Restart Mission Control if service-level credential exposure changes.
4. Run the guarded proof again.
5. Execute upload only after exact Bridge Session scope 'onedrive.upload' exists.

Rollback

After commit:

'git revert <day_60_onedrive_proof_commit_sha>'
