Phase Result

****BLOCKED / PARTIAL.**** The production API and Playwright MCP browser smoke confirm the updated SpaceAgent Browser Automation truth is present, but I cannot truthfully mark owner-authenticated visual proof complete because Codex does not have an owner-authenticated browser session available. Exact blocker: 'owner_authenticated_browser_session_required'.

I did not read or reuse an owner session token directly. A live session may exist, but using a session token from storage would be unsafe and would violate the no direct secret/session handling rule.

Required Visual Checks

Required Check	Result	Evidence
Open Mission Control as owner	BLOCKED	owner_authenticated_browser_session_required
Open Gateway	BLOCKED	requires owner browser session
Open Agent Hub / Control Center	BLOCKED visually	route exists; page redirects to login without session
Open SpaceAgent panel	BLOCKED visually	API detail route returns SpaceAgent data
Browser Automation section visible	PARTIAL	API route returns browser automation truth
Playwright MCP green / connected local-only	PASS via API	Playwright smoke passed; service connected_local_only
Firecrawl red / blocked	PASS via API	Firecrawl card blocker is firecrawl_credential_required
YouTube Research yellow / limited	PASS via API	YouTube card blocker is youtube_transcript_connector_not_proven
Interactive/browser/auth/form/upload actions gated	PASS via API	all gated buttons require Bridge Session
No secrets/raw paths/fake buttons	PASS via API smoke	no unsafe values observed in route payloads

Production Route Proof

Route	Result	Notes
/api/gateway/agent-hub/status	200 authenticated	5 agents visible
/api/gateway/agent-hub/agents/spaceagent	200 authenticated	role: Browser / Firecrawl / YouTube Research Specialist
/api/gateway/nodes/playwright-mcp	200 authenticated	read_only, interactive action requires Bridge Session
/api/gateway/space-agent/browser/status	200 authenticated	Browser Automation truth surface present
/api/gateway/space-agent/playwright-mcp/evidence	200 authenticated	evidence index

present; persistence pending |
| /api/bridge/playwright-mcp/smoke | 200 authenticated | screenshot_available=true,
snapshot_available=true |
| /gateway/agent-hub without session | 307 redirect to /login | page protection works |
| /api/gateway/agent-hub/status without auth | 401 | API protection works |

Browser Automation Card Truth

Card	UI Truth From API	Correct Owner-Facing State
Playwright MCP	installed=true, configured=true, connected=true,	
status=connected_local_only, tone=green	GO local-only read-only	
Firecrawl	installed=false, configured=false, connected=false, status=blocked, tone=red	
blocked until credential/live adapter		
YouTube Research	installed=true, configured=false, connected=false,	
status=limited_pending, tone=yellow | limited until transcript connector is proven |

Button Truth

Button Group	Result
Check Playwright MCP status	enabled, real route
Open last browser evidence packet	enabled, real route
Run Mission Control UI smoke	enabled, real route
Start browser session	disabled / requires Bridge Session
Interactive browser action	disabled / requires Bridge Session
Authenticated browsing	disabled / requires Bridge Session
Submit form	disabled / requires Bridge Session
Upload file	disabled / requires Bridge Session

Screenshot / Browser Smoke Evidence

The production Playwright MCP smoke route returned 'screenshot_available=true' and 'snapshot_available=true' against the Mission Control login surface. This is supporting browser smoke evidence only. It does not satisfy the owner-authenticated visual proof requirement because no owner browser session was available to Codex.

Security Confirmation

- No secrets were printed.
- No API keys, tokens, auth files, or session tokens were printed or reused.
- No .env changes were made.
- No auth weakening occurred.
- No public local service exposure occurred.
- No external writes, Zapier writes, HeyGen generation, SMB/Fork 2, or farmer execution occurred.
- OpenClaw+ naming remains correct; no OpenCloud architecture label was introduced.

Phase 1 Decision

****Phase 1 is not fully complete.**** API/backend truth and browser smoke passed, but owner-authenticated visual proof remains blocked by 'owner_authenticated_browser_session_required'.

Updated Status

System	Status	Percent
Gateway / Agent Hub	PARTIAL GO	72%
SpaceAgent Browser Automation	PARTIAL GO	66%
Playwright MCP	GO local-only read-only	90%
Firecrawl	BLOCKED	25%
YouTube Research	LIMITED	45%

Exact Next Step

Have the owner open Mission Control in an authenticated browser session, then rerun the visual check on Gateway -> Agent Hub -> SpaceAgent. Until that browser session is available, continue with Phase 2 Firecrawl credential/read-only adapter proof because it does not require owner browser interaction.
