

Phase 5 — Firecrawl Read-Only Proof

Generated: 2026-05-08T00:24:27Z

Result

****Status:**** BLOCKED

Exact blocker: `firecrawl\_credential\_required`.

Firecrawl was not moved to connected/read-only because no usable credential source was proven. No Firecrawl scrape, crawl, map, search, or extract call was run.

Credential Source Check

Source	Present
Mission Control service environment	false
Mission Control env files	false
Protected secret file source	false
Overall Firecrawl credential	false

No Firecrawl credential value was printed or copied into this report.

Route Proof

Route	Auth state	HTTP	Result
GET /api/firecrawl/status	unauthenticated	401	Unauthorized
GET /api/gateway/space-agent/browser/status	unauthenticated	401	Unauthorized

Authenticated Firecrawl route proof remains pending until an owner/operator session or approved route credential is available.

Research Packet Decision

No live ResearchPacket was produced because the Firecrawl credential/backend is missing. SpaceAgent can classify Firecrawl work, but cannot claim live Firecrawl access yet.

Guardrails Confirmed

- No credential values were printed.
- No `.env` file was modified.
- No external write was executed.
- No Zapier, HeyGen, SMB/Fork 2, farmer, email, Drive, or OneDrive action occurred.

- Firecrawl remains blocked in Gateway / Agent Hub until credential and live adapter proof pass.
- OpenClaw+ naming remains correct.

Phase 5 Decision

Phase 5 remains **BLOCKED** with `firecrawl\_credential\_required`.
