

Phase 14 - Bridge Session Execution Proof Report

Generated: 2026-05-07T21:12:24-04:00

Result

****PARTIAL / CONTRACT PROOF PASSED, LIVE EXECUTION BLOCKED****

Bridge Session policy and route protection are implemented and tested. A live scoped execution was not performed because no owner-approved active Bridge Session is available in this worker context.

Exact blocker:

``active_bridge_session_required``

Route Protection Smoke

Unauthenticated POST checks after Mission Control restart:

Route	Result	Meaning
POST /api/bridge/session	401	protected
POST /api/bridge/session/open	401	protected
POST /api/bridge/session/status	401	protected
POST /api/bridge/build-wiki/run-now	401	protected

No auth bypass was attempted.

Contract Proof

Requirement	Result
Bridge Session scope required	pass
Protected actions require session	pass
External writes require session	pass
Scope mismatch blocks execution	pass
Expired session blocks execution	pass
Audit required	pass
Agent Zero remains commander	pass
Hermes planning allowed, execution scoped	pass
Build-Wiki execution restricted to exact target	pass
Raw root / Docker / direct secret reads blocked	pass

Tests

Test	Result
src/lib/agent-zero-bridge-session.test.ts	8 passed
src/lib/gateway-policy.test.ts	9 passed
Combined focused tests	17 passed

Execution Status

Action	Result
Open Bridge Session	not performed; owner auth required
Run report-link proof inside session	not performed
Run Build-Wiki Fork 1 service	not performed
Test session expiration live	contract only
Test out-of-scope connector live	contract only

Security Confirmation

- No secrets printed.
- No auth files printed.
- No `.env`` changes.
- No scoped action executed without active session.
- No external writes.
- No SMB/Fork 2.
- No Zapier or HeyGen action.
- No farmer execution.

Updated Percentage

System	Previous	Updated
Bridge Session	contract present	68% PARTIAL GO

Exact Next Step

Use owner/operator authentication to open a scoped Bridge Session, then run one safe approved action and verify audit plus expiration behavior. Preferred safe proof remains Mission Control report-link delivery or the exact Build-Wiki Fork 1 command if explicitly scoped.

Rollback

This phase changed only reports. Rollback command after commit:

```
`git revert <phase-14-commit>`
```
