# Day 05 Phase 7 â Bridge Session Approved Scoped Action

## Objective

Move Bridge Session from gating-only to one approved scoped execution proof.

## Result

BLOCKED.

## Actions Executed

1. Checked Bridge Session state:
  - 'GET /api/bridge/agent-zero/bridge-session'
2. Checked execution gateway registry:
  - 'GET /api/bridge/agent-zero/execute'
3. Attempted one safe scoped execution action:
  - 'POST /api/bridge/agent-zero/execute'
  - action: 'agent\_zero.report.create'

## Evidence

- Bridge session state reports:
  - 'execution\_enabled=false'
  - 'status=blocked'
  - 'blocked\_reason=bridge\_session\_persistence\_not\_applied'
- Execution attempt result:
  - 'ok=false'
  - 'status=blocked'
  - 'accepted\_for\_execution=false'
  - 'blocked\_reason=bridge\_session\_persistence\_not\_applied'

## Classification

- Bridge Session remains **\*\*PARTIAL / BLOCKED\*\***.
- One approved scoped action could not execute because session persistence is not applied.

## Safety Confirmation

- No unauthorized execution occurred.
- No SMB/Fork 2 actions executed.
- No Zapier writes executed.
- No HeyGen generation executed.
- No external farmer execution executed.

## Files Changed

- 'runtime/day-05-phase-7-bridge-session-approved-action.md'
- 'runtime/day-05-phase-7-bridge-session-approved-action.pdf'

## Blockers

- 'bridge\_session\_persistence\_not\_applied'
- 'active\_bridge\_session\_required'
- 'owner\_approval\_pending' (cannot be finalized until persistence path is functional)

## Exact Next Step

Apply Bridge Session persistence schema/state fix, then rerun one scoped action and verify audit  
+ expiry behavior for GO.
