

day-05-phase-8-drive-onedrive-agentmail-path

Day 05 Phase 8 â Drive / OneDrive / AgentMail Path

Objective

Convert delivery connectors from vague blocked state to precise runtime readiness truth.

Result

PARTIAL (precise blockers confirmed; no fake send/upload).

Actions Executed

1. Checked Google Drive status route:
 - 'GET /api/bridge/agent-zero/google-drive/status'
2. Checked OneDrive status route:
 - 'GET /api/bridge/agent-zero/onedrive/status'
3. Checked connector visibility routes:
 - 'GET /api/bridge/connector-readiness'
 - 'GET /api/bridge/providers'
4. Confirmed no send/upload execution was attempted without Bridge Session.

Evidence

- Google Drive status:
 - 'connector_configured=false'
 - 'blocked_reason=google_drive_upload_connector_not_configured'
- OneDrive status:
 - 'connector_configured=false'
 - 'blocked_reason=onedrive_upload_connector_not_configured'
- Provider/connector discovery routes are reachable and auth-protected.
- No successful upload action was claimed.

AgentMail Status

- Direct dedicated AgentMail bridge route is not currently exposed in this runtime route set.
- AgentMail capability remains discoverable only via higher-level ecosystem/registry payloads.
- Outbound send remains gated by Bridge Session and connector readiness policy.

Classification

- Google Drive: ****BLOCKED****
- OneDrive: ****BLOCKED****
- AgentMail delivery path: ****GATED / PARTIAL visibility****

Safety Confirmation

- No tokens printed.
- No auth files printed.
- No raw local paths exposed.
- No external write executed without approved Bridge Session.
- Google Drive and OneDrive remain separate provider paths.

Files Changed

- 'runtime/day-05-phase-8-drive-onedrive-agentmail-path.md'
- 'runtime/day-05-phase-8-drive-onedrive-agentmail-path.pdf'

Blockers

- 'google_drive_upload_connector_not_configured'
- 'onedrive_upload_connector_not_configured'
- 'active_bridge_session_required_for_external_write'

Exact Next Step

Wire/enable provider-specific upload runners with Bridge Session enforcement, then run one scope d upload proof per provider.
