

Day 13 - Mission Control Shell 100% Closure

Date: 2026-05-10

Branch: to-knowledge-mc

Lane: Mission Control Shell

Status: DEVELOPER-SIDE CLOSED

Blocker class: OWNER_GATED for authenticated owner visual confirmation

Current verification HEAD: 9094ef7

Source shell commit in current lineage: 92c130b

Rollback for shell source: git revert 92c130b

Scope

Day 13 closes the developer-side shell/layout defect that could trap or clip long routed pages. The goal is to make Mission Control stop forcing every page into a single fixed viewport and allow natural document scrolling for Gateway FULL v3 and other long surfaces.

This is not owner visual GO. Authenticated owner retest remains required before the Gateway/Mission Control visual lane can move beyond PARTIAL GO.

Inventory Findings

The shell-level offender was:

- 'src/app/layout.tsx'
- prior bad pattern: 'h-screen overflow-hidden bg-background text-foreground'
- current pattern: 'min-h-screen bg-background text-foreground'
- impact: the root document now owns page height instead of clipping long pages.

Related surfaces verified:

- 'src/components/gateway/DesignerGatewayMockFrame.tsx'
- uses 'min-h-screen'
- iframe 'scrolling='yes''
- does not reintroduce 'h-screen w-full overflow-hidden'
- 'public/designer-mission-control/Mission Control.html'
- includes the approved Gateway shell script line:
 - '<script type="text/babel" src="src/gateway/GatewayShell.jsx"></script>'
- 'public/designer-mission-control/src/shell.jsx'
- keeps Gateway as an additive left-rail entry.
- 'public/designer-mission-control/src/gateway/GatewayShell.jsx'
- mounts the approved designer pages through the Gateway drop-in shell.
- 'src/app/tkmc/page.tsx'
- remains a concrete Mission Control home route, not a redirect stub.
- 'src/app/[...panel]/route.ts'
- still protects main app entrypoints and redirects unauthenticated users toward '/login'.

What Was Implemented

Already present in current lineage:

- Replaced the root forced viewport wrapper with a natural document-height wrapper:
 - from: 'h-screen overflow-hidden'
 - to: 'min-h-screen'
- Added shell ownership guardrail tests in:
 - 'src/lib/mission-control-shell.test.ts'

The guardrail now asserts:

- the root shell does not use the fixed/clipped viewport pattern
- the Gateway designer frame stays scrollable
- the accepted designer mock pages keep their own crumbs/links

- '/tkmc' remains a real Mission Control home route
- the approved static 'GatewayShell.jsx' is loaded by the designer Mission Control shell
- the Gateway rail entry uses the existing shell shape and Network icon
- the Gateway shell mounts 'Agent Hub.html' and 'Paperclip.html' as designer pages

Files Changed

Source files already present in current lineage:

- 'src/app/layout.tsx'
- 'src/lib/mission-control-shell.test.ts'

No source changes were required in this current refresh.

Report files refreshed:

- 'runtime/day-13-mission-control-shell-100-closure.md'
- 'runtime/day-13-mission-control-shell-100-closure.pdf'

No designer tokens, designer mock HTML, Gateway FULL v3 class names, or accepted visual contract files were changed.

Routes / UI Behavior

Expected behavior after the shell fix:

- Long pages can use native document scroll instead of being clipped by the root shell.
- Gateway FULL v3 mounted mock pages are no longer fighting an outer 'h-screen overflow-hidden' root.
- Mission Control top-level navigation is provided by the existing left rail.
- Inside Gateway, 'GatewayShell.jsx' provides its internal Gateway subrail.
- No custom nav chrome was injected into the mock pages.
- No fake buttons were added.

Runtime Proof

Proof runtime:

- Base URL: 'http://127.0.0.1:3337'
- Runtime PID: 71076
- Listener: '127.0.0.1:3337'
- Public exposure: none observed in listener check
- Current verification HEAD: '9094ef7'

Unauthenticated route smoke:

- '/login': 200
- '/tkmc': 307 to '/login'
- '/gateway': 307 to '/login'
- '/gateway/agent-hub': 307 to '/login'
- '/gateway/token-governor': 307 to '/login'
- '/agents': 307 to '/login'
- '/agent-network': 307 to '/login'

Route rendering smoke:

- 'node scripts/check-mission-control-route-rendering.mjs http://127.0.0.1:3337'
- ok: true
- routes checked: 46
- designer pages checked: 8
- failures: 0

Authenticated visual shell proof:

- Not performed because this runtime does not include an owner browser session.
- Remaining blocker: 'owner_authenticated_visual_shell_retest_required'

Tests And Checks

Fresh checks run on 2026-05-10:

- 'pnpm test src/lib/mission-control-shell.test.ts'
 - 1 file passed
 - 4 tests passed
- 'git diff --check'
 - passed
- 'pnpm run typecheck'
 - passed
- 'pnpm run build'
 - passed
- 'pnpm test'
 - 171 files passed
 - 1359 tests passed
- 'node scripts/check-protected-file-invariants.mjs'
 - ok: true
- 'node scripts/check-mission-control-route-rendering.mjs http://127.0.0.1:3337'
 - ok: true
- '.env' diff check
 - 0 bytes

Auxiliary harness note:

- Some button/protected-action live-status scripts still need a later route-smoke harness update to pass the local smoke session cookie when probing protected authenticated APIs. They return 401 in this standalone runtime when run with only API-key context. This does not change the Day 1 3 shell result.

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No fake owner visual proof.
- No fake GO.
- No fake buttons added.
- No designer mock redesign.
- No Gateway FULL v3 token/class changes.
- No parked artifacts staged.
- Final proof runtime bound to '127.0.0.1' only.

Remaining Blocker

Blocker: 'owner_authenticated_visual_shell_retest_required'

Classification: OWNER_GATED

Owner retest needed:

- Log in to Mission Control.
- Open '/tkmc'.
- Open '/gateway'.
- Open '/gateway/agent-hub'.
- Confirm pages scroll naturally and are not clipped by the Mission Control shell.
- Confirm owner can move via the Mission Control rail and Gateway subrail without browser-back dependency.

Closeout Ledger

- Day number and lane: Day 13 - Mission Control Shell
- Status: DEVELOPER-SIDE CLOSED
- Blocker classification: OWNER_GATED
- Source commit hash: '92c130b'
- Current verification HEAD: '9094ef7'
- Report refresh commit: pending
- Push result for source implementation: already pushed in current branch lineage
- Runtime proof: local-only standalone proof on '127.0.0.1:3337', pid 71076
- Rollback command: 'git revert 92c130b'
- Next day automatically started: Day 14 - Mission Control Navigation / Back 100% Closure
