

CloudCode Backend Support Consumption Report

Date: 2026-05-09

Status: PARTIAL GO - production-smoked, owner visual retest still required

Summary

CloudCode backend-support was consumed without restarting or replacing the 100-day plan. The package was applied with mailbox patches, then wired into Mission Control / Gateway truth endpoints and the approved static Gateway drop-in shell. The designer mock pages were not modified.

Package Intake

- Source package: 'cloudcode-backend-support-handoff/'
- Apply method: 'git am cloudcode-backend-support-handoff/patches/*.patch'
- Conflicts: none
- Warning: one trailing whitespace warning in 'backend-support/proof/vitest.txt'; fixed during integration
- CloudCode source branch: 'cloudcode/backend-support-gateway-status'
- CloudCode original commits: '491fe09', '4b0b3d2'
- Applied commits in this repository: '529f4a6', '61b2480'
- Integration commit: 'e814ba1b057cd11afdbae1ac203c9256aa1ff2a2'

Helpers Consumed

- 'normalizeGatewayStatus(raw)' now augments '/api/gateway/status'.
- 'ROUTE_METADATA' and 'getBreadcrumbTrail' now power '/api/gateway/navigation'.
- 'runRouteSmoke' and 'buildRouteSmokeReport' now power '/api/gateway/route-smoke' as a safe diagnostics payload.
- 'buildAgentHealth' now augments Agent Hub status and per-agent health routes.
- 'buildBuildWikiStatus' and 'evaluateRunNowGate' now augment Build-Wiki / Farmer status.
- 'classifyError' and 'classifyErrors' now surface owner-facing blocker categories.

Designer Drop-In Integration

- Added 'src/gateway/GatewayShell.jsx' to the static Mission Control shell.
- Added the one required script line to 'public/designer-mission-control/Mission Control.html'.
- Added a Gateway left-rail entry in 'public/designer-mission-control/src/shell.jsx'.
- Adapted 'public/designer-mission-control/src/app.jsx' so selecting Gateway renders 'GatewayShell'.
- Confirmed 'GatewayShell.jsx' matches the shared drop-in source by SHA-256.
- The approved mock HTML/CSS/class names were not changed.

Routes Changed

- '/api/gateway/status'
- '/api/gateway/navigation'
- '/api/gateway/route-smoke'
- '/api/gateway/agent-hub/status'
- '/api/gateway/agent-hub/agents/[id]/health'
- '/api/bridge/brain-sync/build-wiki/status'

UI Behavior

- Gateway static Mission Control now has a top-level Gateway rail entry.
- GatewayShell owns its internal sub-rail and iframe drop-in behavior.
- Mission Control Home, Back, Gateway Overview, and Agent Hub targets are exposed through navigation metadata.
- Route Smoke now exposes safe table data instead of raw confusing output.
- Agent Hub status routes now include normalized agent health rows so the UI does not need to guess fake LIVE states.
- Build-Wiki Run Now remains approval-gated and disabled until owner approval.

Validation

- 'git diff --check': PASS
- 'pnpm run typecheck': PASS
- 'pnpm run build': PASS
- 'pnpm test': PASS, 171 files / 1356 tests
- Backend-support typecheck: PASS
- Backend-support build: PASS
- Backend-support tests: PASS, 9 files / 104 tests
- Protected-file invariant scan: PASS
- Changed-file secret scan: PASS
- Staged secret scan: PASS
- '.env' status check: clean

Runtime Proof

- Built standalone runtime and restarted Mission Control.
- Previous PID: '98651'
- New PID: '8391'
- Runtime bind: '127.0.0.1:3337'
- '/login': 200
- No new public exposure.

Unauthenticated route smoke:

- '/gateway': 307 to '/login'
- '/gateway/agent-hub': 307 to '/login'
- '/gateway/agent-hub/paperclip': 307 to '/login'
- '/gateway/dispatcher': 307 to '/login'
- '/gateway/token-governor': 307 to '/login'
- '/gateway/bridge-session': 307 to '/login'
- '/agent-network': 307 to '/login'
- '/agents': 307 to '/login'

Authenticated smoke used a short-lived local session row that was deleted after the check:

- '/gateway': 200
- '/gateway/agent-hub': 200
- '/gateway/agent-hub/paperclip': 200
- '/gateway/dispatcher': 200
- '/gateway/token-governor': 200
- '/gateway/bridge-session': 200
- '/agent-network': 307 to '/gateway/agent-hub'
- '/agents': 307 to '/gateway/agent-hub'

Authenticated API smoke:

- '/api/gateway/status': 200, CloudCode applied, normalized Gateway status returned
- '/api/gateway/agent-hub/status': 200, CloudCode agent health returned
- '/api/gateway/navigation?route=/gateway/agent-hub': 200, breadcrumb count 3, Home/Back/Overview/Agent Hub targets present
- '/api/gateway/route-smoke': 200, safe diagnostics payload returned
- '/api/bridge/brain-sync/build-wiki/status': 200, service fixed to 'opencloud-docs-farmer.service', Run Now not executable without approval

Browser smoke:

- Route: '/gateway/agent-hub'
- Viewport: 1480 x 900
- Screenshot: 'runtime/cloudcode-gateway-agenthub-smoke.png'
- 'bodyScrollHeight': 4163
- 'clientHeight': 900
- iframe count: 1

- root overflow hidden: false

Remaining Blockers

- 'OWNER_GATED': owner visual retest is still required before Gateway UI can be marked GO.
- Gateway status is honestly degraded because downstream lanes still include blockers; this is expected and not a fake GO.
- Owner-facing visual acceptance remains pending.

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public bind added.
- No SMB/Fork 2.
- No Zapier writes.
- No external writes.
- No fake LIVE status introduced.
- No mock HTML/CSS/class edits.

Rollback

Rollback the integration and CloudCode package:

```
""bash
git revert e814ba1b057cd11afdbae1ac203c9256aa1ff2a2 61b24808a1331c4803bf22a588d83cdc557667ce 529f4a6
""
```

Restart Mission Control after rollback if production has been restarted onto these commits.

Next Step

Continue the 100-day plan. The immediate next gate is owner visual retest for Gateway, then Agent Zero commander proof and the rest of the main production lanes.
