Day 58 - Google Drive Proof Closure

Date: 2026-05-10

Lane: Google Drive proof

Status: CREDENTIAL_GATED / BACKEND_MISSING proof harness complete

Branch: to-knowledge-mc

Objective

Close the developer-side Google Drive proof lane without fake uploads.

Scope

The lane verifies that Google Drive upload/link proof remains Bridge-gated, requires provider auth and a target folder, never exposes a raw local path, and never claims upload unless a real adapter verifies it.

Implementation

Updated Google Drive delivery proof behavior:

- Upload proof now exposes 'required_scope: google_drive.upload'.
- Upload proof declares 'target_folder_required: true'.
- Upload proof reports whether target folder configuration exists.
- Blocked upload results now include 'no_upload_performed: true'.
- Link verification remains blocked through the same safe result surface.
- Readiness guard script now fails if upload proof does not expose the required scope and no-upload truth.

Files Changed

- 'src/lib/agent-zero-google-drive-delivery.ts'
- 'src/lib/agent-zero-google-drive-delivery.test.ts'
- 'scripts/check-google-drive-readiness-guard.mjs'

UI Behavior

No fake upload state is introduced. The UI must continue showing Google Drive as gated/blocked until:

- Bridge Session scope exists for 'google_drive.upload'.
- Google Drive auth is present.
- Target folder is configured.
- A real provider upload/list runner verifies the operation.

Tests

Focused Google Drive adapter tests passed as part of the current focused gate:

- 'src/lib/agent-zero-google-drive-delivery.test.ts'

Result: 3 tests passed.

Full validation run:

- 'git diff --check': passed.
- 'pnpm run typecheck': passed after clearing stale generated '.next/types'.
- 'pnpm run build': passed.
- 'pnpm test': passed, 181 files / 1414 tests.
- 'scripts/check-protected-file-invariants.mjs': passed.
- '.env' diff check: no diff.

Runtime proof on '127.0.0.1:3337':

- 'scripts/check-google-drive-readiness-guard.mjs': passed.
- Authenticated status returned 'CREDENTIAL_GATED'.
- Blocker: 'google_drive_credential_required'.
- Upload proof returned HTTP 423.
- Upload proof included 'required_scope: google_drive.upload'.
- Upload proof included 'no_upload_performed: true'.
- No fake upload, no fake done, no token exposure.

External Writes

No Google Drive upload was attempted.
No external write occurred.
No token or OAuth secret was printed.

Blocker Classification

CREDENTIAL_GATED / BACKEND_MISSING:

- Google Drive OAuth/provider execution is not proven in the current runtime.
- Upload remains blocked until approved Bridge scope and provider adapter proof are present.

Rollback

After commit:

'git revert <day_58_google_drive_commit_sha>'
