

Phase 6 — YouTube Transcript Connector Proof

Generated: 2026-05-07T23:16:17Z

Result

Status: LIMITED / BLOCKED

YouTube Research remains limited with youtube_transcript_connector_not_proven. No fake transcript claims were made.

Capability Signals

Check	Result
YouTube card status	`limited\_pending`
YouTube card tone	`yellow`
YouTube card blocker	`youtube\_transcript\_connector\_not\_proven`
`yt-dlp` installed in report shell	`True`
package dependency hint present	`False`
transcript-backed source proven	`False`
full video downloaded	`false`

Route Proof

Route	Auth	HTTP	Key result
`GET /api/gateway/space-agent/browser/status`	yes	200	ok=True, mode=space_agent_browser_automation_truth, execution_enabled=False, writes_enabled=False
`POST /api/gateway/space-agent/research`	yes	423	ok=False, mode=space_agent_research_packet_planning, blocked_reason=copyrighted_video_download_blocked_by_default, execution_enabled=False, writes_enabled=False
`POST /api/gateway/space-agent/research`	no	401	error=Unauthorized

Evidence Decision

The production route can classify YouTube research, but a dedicated live transcript connector is not proven. The system must keep YouTube yellow/limited until a transcript adapter returns real source/evidence rows.

Guardrails Confirmed

- No full video download was attempted.
- No login, age restriction, region restriction, copyright, or paywall bypass was attempted.

- No external write was executed.
- No .env change was made.
- No fake transcript analysis was claimed.
- OpenClaw+ naming remains correct.

Exact Next Step

Add or configure a production YouTube transcript adapter that returns title, channel, publish date, description, transcript availability, transcript-backed claims, and timestamps for public videos. Until then the correct Gateway status is limited / transcript_connector_not_proven.
