

day-04-phase-1-day03-closeout-validation

Day 04 Phase 1 â Day 03 Closeout Validation

Objective

Close Day 03 cleanly by resolving the local validation gate failure and re-running the required checks before continuing implementation.

Actions Executed

1. Verified current branch and workspace state.
2. Resolved local 'pnpm' execution gate:
 - 'corepack enable pnpm'
 - verified 'pnpm --version' returned '11.0.8'.
3. Re-ran validation commands:
 - 'git diff --check'
 - 'pnpm run typecheck'
 - 'pnpm run build'
 - 'pnpm run test'
4. Started local production server for route smoke:
 - 'PORT=3000 pnpm run start'
5. Ran unauthenticated smoke against protected route families:
 - all sampled Gateway/Bridge/SpaceAgent routes returned '401'.
6. Ran route rendering smoke:
 - 'MISSION_CONTROL_BASE_URL=http://127.0.0.1:3000 node scripts/check-mission-control-route-rendering.mjs'
 - returned 'ok: true' for local unauth contract behavior.
7. Ran secret-pattern scan on modified files only (no hits).
8. Checked '.env' diff status (no '.env' changes).

Commands Used

- 'corepack enable pnpm'
- 'pnpm --version'
- 'git diff --check'
- 'pnpm run typecheck'
- 'pnpm run build'
- 'pnpm run test'
- 'PORT=3000 pnpm run start'
- 'MISSION_CONTROL_BASE_URL=http://127.0.0.1:3000 node scripts/check-mission-control-route-rendering.mjs'
- 'curl' unauth status probes for protected routes
- 'git status --short -- .env .env.*'

Proof

- 'typecheck': PASS
- 'build': PASS
- 'test': PASS ('138' test files, '1247' tests passed)
- unauthenticated protected routes: PASS ('401' across sampled protected endpoints)
- route rendering smoke: PASS ('ok: true')
- secret scan on changed files: PASS (no secret-pattern hits)
- '.env' diff check: PASS (clean)

Authenticated Smoke Status

- Local authenticated smoke is currently blocked by missing local API key seed in '.data/mission-control.db':
 - blocker: 'mission_control_api_key_not_seeded'
- This does **not** invalidate accepted Day 01 production authenticated smoke evidence already confirmed by owner.

Files Changed

- 'scripts/render-report-pdf.mjs'
- Day 04 phase reports (this batch)
- Implementation files already in Day 04 working set (Telegram adapter + YouTube connector)

Services

- Local app server started successfully on 'http://127.0.0.1:3000' for smoke.
- No public exposure was added.

Commits

- No new commit yet in this phase closeout checkpoint.
- Day 03 report commit remains previously pushed ('fa66d00').

Rollback

- Validation-only actions are reversible by stopping local server session.
- No database mutation and no '.env' mutation were introduced in this phase.

No-Secrets Confirmation

- No token values printed.
- No credential file contents printed.
- No '.env' edits.

Updated Percentage

- Day 03 validation blocker 'ERR_PNPM_IGNORED_BUILDS' moved to resolved in local execution path.
- Overall ecosystem remains PARTIAL GO pending owner/session/credential-dependent tracks.

Exact Next Step

- Continue Day 04 implementation phases:
 - Phase 2 owner-session package for Paperclip,
 - Phase 3 Bridge Session approved execution package,
 - delivery adapter implementation tracks and proof routes.
