

Day 04 Phase 3 â Bridge Session Approved Execution

Objective

Move Bridge Session from "gating proven" to "one scoped approved action executed", or emit the exact owner approval package when approval is unavailable.

Actions Executed

1. Verified Bridge Session routes remain protected in local smoke:
 - 'GET /api/bridge/agent-zero/bridge-session'
 - 'GET /api/bridge/agent-zero/bridge-session/audit'
2. Confirmed unauthenticated requests are denied ('401') and execution is not faked.
3. Reviewed Bridge Session code paths and blockers:
 - 'owner_approval_pending'
 - 'active_bridge_session_required'
4. Confirmed no unsafe fallback execution path was introduced.

Commands Used

- 'curl' route status probes
- source inspection in 'src/lib/agent-zero-bridge-session.ts' and related route handlers

Proof

- Bridge Session endpoints are locked behind auth and do not execute unauthenticated actions.
- Prior accepted evidence (Day 02/03) that approval-gating behavior is enforced remains consistent.

Blocker

- 'owner_approval_pending' (or 'active_bridge_session_required' until a scoped session is approved)

Owner Action Package

1. Approve one scoped Bridge Session for exactly one safe action:
 - preferred: Mission Control report link confirmation.
2. Scope must be explicit and minimal.
3. After approval, Codex will run exactly one action and verify:
 - 'accepted_for_execution=true'
 - audit record persisted
 - session expiration
 - out-of-scope action still blocked

Safety/Policy Confirmation

- No broad connector execution.
- No SMB/Fork 2.
- No Zapier writes.
- No HeyGen generation.
- No external farmer execution.

Files Changed

- Report artifact only for this phase.

Tests

- Covered by existing Bridge/Agent Zero execution tests in full test suite (PASS).

Commits

- No new commit yet for this phase checkpoint.

Rollback

- No runtime mutation performed in this phase.

No-Secrets Confirmation

- No secret values printed.
- No auth/session internals exposed.

Updated Percentage

- Bridge Session remains PARTIAL GO until one owner-approved scoped execution completes end-to-end with audit + expiry proof.

Exact Next Step

- Execute the owner-approved scoped action and capture live audited completion evidence.
