

Day 04 Phase 4 â Telegram PDF Attachment Adapter

Objective

Implement a real Telegram PDF attachment adapter path for Agent Zero report delivery, with truthful blocked/completed states and strict safety controls.

Implementation Completed

New runtime adapter

- Added 'src/lib/agent-zero-telegram-delivery.ts'
- 'getAgentZeroTelegramDeliveryStatus()'
- 'uploadAgentZeroReportToTelegram(...)'

New API routes

- 'GET /api/bridge/agent-zero/telegram/status'
- file: 'src/app/api/bridge/agent-zero/telegram/status/route.ts'
- 'POST /api/bridge/agent-zero/telegram/upload-report'
- file: 'src/app/api/bridge/agent-zero/telegram/upload-report/route.ts'

Delivery contract wiring

- Updated Telegram delivery blocker mapping in:
 - 'src/lib/agent-zero-report-delivery.ts'
 - 'src/lib/agent-zero-report-delivery.test.ts'
 - 'src/lib/agent-zero-bridge.ts'

Behavior Contract

1. Requires preconfigured owner-channel token/chat mapping (by name only; value never exposed).
2. Requires active approved Bridge Session for external send.
3. Uses report id, not raw file path input.
4. Returns truthful status:
 - 'blocked' when connector/session/approval/report is missing
 - 'failed' on Telegram API boundary failure
 - 'completed' only on real Telegram API success
5. Returns 'no_fake_done: true' and 'no_tokens_exposed: true'.

Commands/Tests Run

- 'pnpm run typecheck' (PASS)
- 'pnpm run build' (PASS)
- 'pnpm run test' (PASS)
- target tests included:
 - 'src/lib/agent-zero-telegram-delivery.test.ts'
 - 'src/lib/agent-zero-report-delivery.test.ts'

Proof

- Build output includes:
 - '/api/bridge/agent-zero/telegram/status'
 - '/api/bridge/agent-zero/telegram/upload-report'
- New adapter tests pass.
- No raw path exposure introduced in adapter response contract.

Current Live Status

- Adapter path is implemented.
- Live send remains gated until connector credentials + approved Bridge Session are present.

Blockers (if live send attempted now)

- 'telegram_report_delivery_adapter_not_configured' (if token/chat missing), or
- 'active_bridge_session_required' / 'owner_approval_pending' (if no active approved Bridge session).

Files Changed

- 'src/lib/agent-zero-telegram-delivery.ts'
- 'src/lib/agent-zero-telegram-delivery.test.ts'
- 'src/app/api/bridge/agent-zero/telegram/status/route.ts'

- 'src/app/api/bridge/agent-zero/telegram/upload-report/route.ts'
- 'src/lib/agent-zero-report-delivery.ts'
- 'src/lib/agent-zero-report-delivery.test.ts'
- 'src/lib/agent-zero-bridge.ts'

Services

- No public service exposure added.
- External send only possible through scoped Bridge Session gating.

Commits

- Pending commit in current Day 04 workstream.

Rollback

- Revert the files above to restore prior blocked-only Telegram behavior.

No-Secrets Confirmation

- Bot token values are never logged or returned.
- No '.env' file mutation.
- No auth file contents exposed.

Updated Percentage

- Telegram delivery moved from "no adapter route" to "implemented + gated + test-proven".
- Not marked GO until one approved scoped send succeeds.

Exact Next Step

- Execute one owner-approved Bridge-scoped Telegram report attachment and capture audited successes.
