

Phase 005 - Agent Zero to Hermes Collaboration Gate

Generated: 2026-05-07T16:54:40-04:00

Result

Phase 005 status: ****PARTIAL PASS.****

The Agent Zero to Hermes collaboration protocol route works as a safe planning-only handoff, returns a structured workflow plan, keeps execution and writes disabled, and records audit events. It is not a full live-Hermes proof because the response source is ``mission_control_hermes_contract``, while Phase 004 still blocks the actual Hermes live adapter.

Route Proof

```
| Route | HTTP | Result |
| --- | ---: | --- |
| `GET /api/bridge/agent-zero/hermes-handoff` | 200 | Collaboration protocol metadata visible with auth. |
| `POST /api/bridge/agent-zero/hermes-handoff` | 200 | Planning handoff completed. |
| Unauthenticated route access | 401 | Protected by Mission Control auth. |
```

Handoff Test

```
| Item | Result |
| --- | --- |
| Task | Design an email triage workflow for Agent Zero. Do not execute. |
| `hermes_called` | `true` on the collaboration protocol route |
| Response source | `mission_control_hermes_contract` |
| Hermes live adapter | Still blocked by Phase 004 |
| Plan returned | Yes, 4 workflow steps |
| Agent Zero review | Usable planning artifact |
| Execution enabled | `false` |
| Writes enabled | `false` |
| Timed out | `false` |
| Raw IDs exposed to owner | `false` |
| Owner-facing reply | "Hermes drafted the workflow plan plan for Agent Zero review. No execution occurred." |
```

Audit Proof

Mission Control audit contains ``agent_zero.hermes_handoff`` events. This proves the handoff route writes internal audit records without exposing raw correlation IDs in the owner-facing response.

What Passed

- Agent Zero can request a Hermes planning/workflow artifact through Mission Control.
- Hermes contribution stays plan/spec/recommendation only.
- Agent Zero remains the final reviewer/commander.
- No external writes occurred.
- No email, Drive, OneDrive, Zapier, HeyGen, SMB, or farmer action occurred.
- Loop guard and timeout fields are present.
- Owner-facing response does not expose raw internal IDs.

What Remains Blocked

```
| Blocker | Impact |
| --- | --- |
| `hermes_safe_live_chat_adapter_not_configured` | The collaboration route is not proof of real live Hermes chat. Hermes remain
| Owner-authenticated browser session unavailable | Collaboration UI smoke cannot be fully verified in browser. |
```

Security Confirmation

- No secrets were printed.
- No `.env`` files were changed.
- No auth weakening occurred.
- No public Hermes UI exposure was added.
- No raw shell, Docker socket, or direct secret access was granted.

Next Step

Continue to Phase 006 Playwright MCP Production Hardening. Hermes remains partial until a safe no-tool/no-write live adapter exists.

Rollback

This phase adds report artifacts only. Rollback command after commit: ``git revert <phase-005-commit>``.
