

Day 2 - Agent Zero to Hermes Collaboration Report

Objective

Prove whether Agent Zero can delegate planning-only work to Hermes through Gateway without execution, writes, fake live status, raw paths, or secret exposure.

Result

****PARTIAL GO.**** Agent Zero can use the Gateway handoff route to prepare a Hermes planning contract draft with audit and no execution. Live Hermes runtime collaboration remains blocked because the safe Hermes live adapter is still not configured.

This phase also remediated a misleading production field: the handoff route no longer returns `hermes\_called:true` for a Mission Control contract draft. It now reports `hermes\_called:false` until a real safe Hermes runtime call exists.

Updated Percentage

System	Previous	Current	Decision
Agent Zero to Hermes collaboration	35%	48%	PARTIAL GO, contract-only
Hermes live runtime	42%	42%	NO-GO live
Gateway handoff honesty	80%	86%	Improved; no fake live Hermes call

Actions

Action	Result
Tested production `POST /api/bridge/agent-zero/hermes-handoff` before remediation	Route returned a planning contract, but over-reported `hermes_called:true`
Updated collaboration contract semantics	`hermes_called:false` unless a real live Hermes adapter is proven
Added explicit `hermes_contract_plan_prepared`	`true` when Mission Control prepares the contract draft
Added explicit `live_hermes_adapter_required`	`true` while live Hermes runtime remains blocked
Kept execution disabled	PASS
Kept writes disabled	PASS
Kept unauthenticated handoff blocked	PASS, HTTP 401
Preserved Agent Zero as commander	PASS
Preserved Hermes as lieutenant / planning-only	PASS
Restarted Mission Control after code deploy	PASS

Commands And Routes Used

Command / Route	Purpose	Result
`POST /api/bridge/agent-zero/hermes-handoff` with auth	Agent Zero asks Hermes planning contract route for workflow plan	HTTP 200 contract draft
`POST /api/bridge/agent-zero/hermes-handoff` without auth	Verify protected route behavior	HTTP 401
`POST /api/bridge/hermes/test-chat` with auth	Verify live Hermes adapter state	HTTP 503, exact blocker
`vitest` focused Hermes handoff test	Verify contract semantics	PASS, 8 tests
`vitest` Hermes bridge tests	Verify safe Hermes blocker route	PASS, 20 tests
TypeScript check	Verify type safety	PASS
Next production build	Verify deployable build	PASS

| Mission Control restart after code change | Put latest code live | PASS |

Production Proof

Production HEAD after deploy: `4d1bc52`.

Mission Control service proof after the code deploy:

Item	Value
Previous PID	3290510
New PID	3293141
New active timestamp	Fri May 8 09:01:17 2026 EDT
Service state	active

Authenticated Agent Zero to Hermes handoff result after deploy:

Field	Value
HTTP status	200
`ok`	true
`hermes_called`	false
`hermes_contract_plan_prepared`	true
`live_hermes_adapter_required`	true
`blocked_reason`	`hermes_safe_live_chat_adapter_not_configured`
execution enabled	false
writes enabled	false

Authenticated Hermes live test-chat after deploy:

Field	Value
HTTP status	503
`ok`	false
`hermes_called`	false
`blocker`	`hermes_safe_live_chat_adapter_not_configured`

Unauthenticated handoff route returned HTTP 401.

Files Changed

File	Change
`src/lib/agent-zero-hermes-collaboration.ts`	Split contract draft proof from real live Hermes runtime proof
`src/lib/agent-zero-hermes-collaboration.test.ts`	Updated tests to require `hermes_called:false` for contract-only planning
`runtime/day-02-agentzero-hermes-collaboration-report.md`	Added this report
`runtime/day-02-agentzero-hermes-collaboration-report.pdf`	Generated PDF report

Commits

Commit	Purpose
`c33cdd9`	Keep Hermes handoff runtime proof honest
`4d1bc52`	Clarify Hermes handoff contract wording

Tests

Test	Result
------	--------

```
| --- | --- |
| `src/lib/agent-zero-hermes-collaboration.test.ts` | PASS, 8 tests |
| `src/lib/hermes-bridge.test.ts` | PASS, 20 tests |
| TypeScript check | PASS |
| Next production build | PASS |
| Production authenticated handoff smoke | PASS |
| Production unauthenticated handoff smoke | PASS, 401 |
| Production Hermes live adapter smoke | PASS for exact blocker |
```

Blockers

```
| Blocker | Impact | Exact Next Step |
| --- | --- | --- |
| `hermes_safe_live_chat_adapter_not_configured` | Prevents live Hermes runtime collaboration and Hermes GO | Build or install a dedicated safe local Hermes adapter that disables tools, writes, shell, connectors, memory mutation, approval bypass, and secret access |
```

Rollback

Rollback command for the code change:

```
```bash
git revert c33cdd9 4d1bc52
```

Then rebuild and restart Mission Control.

## ## No-Secrets Confirmation

No secrets, token values, auth files, API keys, or `.env` content were printed or committed. `.env` files were not modified.

## ## Final Decision

Agent Zero to Hermes collaboration is **\*\*PARTIAL GO\*\*** for a planning-only Mission Control contract draft, but **\*\*not live Hermes GO\*\***. Gateway now tells the truth: contract draft prepared, no execution, no writes, and no fake `hermes\_called:true`.
