

Agent Zero and Hermes 24h Operational Report

Generated: 2026-05-04, America/New_York

1. Executive Summary

Agent Zero remains PARTIAL GO and is the active commander in the Mission Control bridge model. The production Agent Zero status route is authenticated and healthy, Agent Zero test-chat is working with `agent\_zero\_called:true`, and Agent Zero can live-query Mission Control context for Bridge/MCP, Brain systems, Build-Wiki/Farmer, models, integrations, and skills.

Hermes remains NO-GO for live chat and live collaboration. The Hermes gateway service is active and the authenticated Hermes status route returns 200, but production `POST /api/bridge/hermes/test-chat` still returns 405. That means `hermes\_called:true` is not proven in production and Agent Zero-to-Hermes live collaboration is not proven.

Tony is retired from the active commander model. Remaining Tony references are either historical, archived, legacy, or parked artifacts. Any old Telegram bot display name that still says Tony requires an owner-controlled BotFather rename; code cannot honestly claim that external account rename is complete.

OpenCloud and Build-Wiki must be kept. Agent Zero can see Build-Wiki/Farmer status and the safe Run Now scope, but OpenCloud replacement coverage is not complete enough to destroy or disable OpenCloud safely.

2. Completion Percentages

Area	Status	Percentage	Reason
Agent Zero integration	PARTIAL GO	89%	Live test-chat works; live context works; execution remains Bridge Session gated; production restart still needed for latest skill-specific reply code.
Mission Control integration	PARTIAL GO	86%	Full tests/build pass; production service is active but still running the old process timestamp.
Brain/Obsidian/MemPalace/Graphify	PARTIAL GO	80%	Live read/status context works; write claims are blocked unless adapter/session allows.
Bridge/MCP/tools/models/skills	PARTIAL GO	84%	Bridge/MCP and registries visible; Zapier MCP OAuth is expired/degraded; production restart needed for latest skill normalization.
Skills/OpenClaw+	PARTIAL GO	92% code, 84% production	Shared skill registry code is complete and tested; latest build smoke passed; production process not restarted yet.
External connectors	PARTIAL GO	58%	Google Drive visible; OneDrive blocked; Firecrawl missing credential; n8n not installed; uploads/sends not live-tested inside session.
Tony retirement	PARTIAL GO	86%	Active commander model is Agent Zero; parked artifacts and legacy reports still contain Tony historical references.
Hermes readiness	NO-GO live, PARTIAL read-only	42%	Service/status route exists; production test-chat is 405; no live collaboration proof.
OpenCloud replacement	NO-GO for decommission	70%	Build-Wiki status visible and scoped Run Now known; OpenCloud dependency map still says keep.
Overall ecosystem readiness	PARTIAL GO	84%	Strong read-only and test coverage, but live Hermes, production restart, and connector execution proofs remain blocked.

3. GO / PARTIAL GO / NO-GO Decision

Agent Zero: PARTIAL GO.

Reason: Agent Zero can chat through production Mission Control and live-query ecosystem context. He cannot be called full GO until production is restarted onto the newest guardrail/skill code, all owner live tests pass after restart, report delivery is proven, and Bridge Session execution proofs are completed.

Hermes: NO-GO for live integration.

Reason: Hermes service/status exists, but production test-chat returns 405 and `hermes\_called:true` is not proven.

Joint ecosystem: PARTIAL GO.

Reason: Agent Zero can operate read-only as commander, while Hermes and several delivery/connectors remain blocked or unproven.

4. Phase Status Summary

Phase Range	Goal	Status	Notes
40-49	Shared skill registry	Completed in code and committed	Commit `6c45ed0`. Latest build smoke passed. Production restart still required.
50-59	Brain status proof	Completed read-only proof	Agent Zero sees Brain Sync, Obsidian, MemPalace, Graphify; write claims remain blocked in owner-facing reply.
60-69	Build-Wiki/OpenCloud proof	Completed read-only proof	Build-Wiki Run Now remains scoped to `opencloud-docs-farmer.service`; no farmer execution occurred.
70-79	Hermes owner access	Blocked	Hermes status route 200; test-chat 405 in production.
80-89	Agent Zero-Hermes collaboration	Blocked	Collaboration route returned 405 in production; no live handoff proven.
90-99	AgentMail/report delivery	Partial/blockers	Email visible; sends require Bridge Session and allow-list. Report delivery not live-tested in this pass.
100-109	Connectors	Partial/blockers	Google Drive visible; OneDrive blocked; Firecrawl missing credential; n8n not installed. No external writes run.
110-119	Models/providers	Partial GO	Anthropic/Claude connected; OpenAI configured; OpenRouter configured; Gemini/Groq blocked; Codex auth file exists in Agent Zero plugin, CLI not found inside container.
120-129	Bridge Session	Blocked/inactive	Bridge Session route exists; active execution is false; no adapter execution run.
130-139	UI/live owner proof	Partial/blockers	API smoke passed; authenticated browser/Telegram owner proof not executed in this pass.
140-149	Gauntlets/tests/services	Completed for test suites	Mission Control full tests passed; ClaudeClaw full tests and 100k gauntlet passed; services checked.
150-160	Final report	Completed	Markdown and PDF report created.

5. Agent Network Result

Agent Zero is the commander in the Mission Control bridge/provider model. Hermes is intended as lieutenant / skill-workflow specialist, but live Hermes chat is not proven. Tony is not the active commander. Engine, tool, model, Bridge/MCP, and Brain systems remain under the Agent Zero-led ecosystem model.

6. Brain Sync / Brain Map Result

Agent Zero live prompt returned a safe Brain answer:

- Obsidian: visible, connected, read available, write blocked in owner-facing read-only chat.
- MemPalace: visible, connected, read available, write blocked in owner-facing read-only chat.
- Graphify: visible/status available, read available, write blocked.
- Brain Sync: visible, connected, read available, write blocked.

Brain status route reports 5 read-only sources: Agent Zero brain, Brain Sync, MemPalace, Obsidian, Graphify. Build-Wiki/Farmer is visible through its dedicated status route.

7. Mission Control Live Access

- ``mission-control.service``: active.
- Production process: active since 2026-05-03 22:33:02 EDT.
- Production route ``GET /api/bridge/agent-zero/status``: 200 authenticated.
- Production route ``POST /api/bridge/agent-zero/test-chat``: 200 with ``agent_zero_called:true``.
- Unauthenticated Agent Zero status route: 401.
- Unauthenticated Hermes status/test-chat routes: 401.
- Production restart remains needed to load the newest skill-specific read-only reply code from commit ``6c45ed0``.

8. Bridge / MCP Access

- Bridge providers route: authenticated 200, 8 providers.
- MCP list route: authenticated 200, 21 servers.
- Zapier MCP tools route: 503/degraded because no non-expired Claude MCP OAuth token is available for Zapier.
- Execution remains disabled unless an owner-approved Bridge Session is active.
- No MCP tool invocation occurred.

9. Models, Tools, Integrations, Skills

Model/provider status from registry:

- Anthropic / Claude: connected, 3 models.
- OpenAI: configured, 4 models.
- OpenRouter: configured, 15 models.
- Ollama / Local: configured, 1 model.
- Gemini / Google: blocked, not configured or not visible in provider registry.
- Groq: blocked, not configured or not visible in provider registry.

Integration status from registry:

- Build-Wiki: connected, read-only, write disabled.
- Email providers: connected, read-only, write disabled.
- Firecrawl: blocked, credential required.

- GitHub: connected, read-only, write disabled.
- Google Drive: connected/read-visible, upload not proven in this pass.
- HeyGen: configured/read-only, generation not run.
- MCP tools: configured but Zapier OAuth degraded.
- OneDrive: blocked, not visible/configured.
- OpenCloud farmer: connected/read-only.
- Slack: connected/read-only.
- SMS: blocked.
- Telegram: blocked in Mission Control integration registry, despite ClaudeClaw Telegram routing history.
- WhatsApp: blocked.
- Zapier: connected/read-only, no writes run.

Skills:

- Latest code now returns 23 normalized `/api/skills` records with required fields.
- Latest Agent Zero ecosystem context returns 130 normalized skill records.
- 0 Tony-owned active skills in latest build smoke.
- 0 execution-enabled skills without Bridge Session in latest build smoke.
- Production still needs restart for the latest skill-specific reply behavior.

10. OpenClaw+ / ClaudeClaw Runtime

OpenClaw+ / ClaudeClaw remains the backend skills, runtime, reports, adapters, governance, and voice layer. Tony no longer owns the active skill system. Agent Zero and Hermes are both marked as skill consumers in the shared registry, but Hermes live consumption is not proven until the test-chat route works.

ClaudeClaw validation passed:

- Typecheck passed.
- Build passed.
- Tests passed: 61 files, 1213 passed, 4 skipped.
- Design-lock verification passed.
- ClaudeClaw 100,000-scenario dry gauntlet passed with 0 hard-fail leaks.

11. Brain Systems

System	Visible	Live Query	Read	Write	Blocker
Brain Sync	yes	yes	yes	no	Write adapter disabled in read-only owner chat.
Obsidian	yes	yes	yes	blocked in read-only chat	Writes require Bridge Session and adapter.
MemPalace	yes	yes	yes	blocked in read-only chat	Writes require Bridge Session and adapter.
Graphify	yes	yes	status/query visible	no	Write adapter disabled.
Build-Wiki/Farmer	yes	yes	yes	Run Now gated	Requires Bridge Session/owner approval and exact service scope.

12. AgentMail / Email Status

Email providers are visible and connected in the integration registry, read-only. Outgoing send was not run because no active Bridge Session was opened in this pass. Domain allow-list proof is present in ClaudeClaw tests, but no live outbound message was sent in this pass.

Required next proof: open an owner-approved Bridge Session and send one allowed-domain test email, or mark outgoing blocked if the adapter refuses.

13. Google Drive / OneDrive Status

Google Drive is visible/connected in registry, but upload was not live-tested because Bridge Session execution was not active. OneDrive is blocked as not visible/configured. No fake upload claim was made.

14. Build-Wiki / OpenCloud Status

- Build-Wiki/Farmer status route: authenticated 200.
- Run Now target: `opencloud-docs-farmer.service` only.
- Run Now owner-facing prompt: Agent Zero correctly says approval/Bridge Session required and does not execute.
- Fork 1 remains the active safe path.
- Fork 2 / SMB remains blocked because SMB mount is not verified.
- `opencloud-docs-farmer.timer`: active.
- `opencloud-docs-farmer.service`: inactive at final service check.

OpenCloud should not be destroyed. Recommendation: keep OpenCloud and Build-Wiki/Farmer infrastructure until Agent Zero replacement coverage is proven, Hermes live route is working, and a rollback/decommission plan is approved.

15. Tony Retirement Status

Tony is retired from the active commander model. Remaining Tony references in the tree are parked historical reports, legacy artifacts, rollback notes, or archived runtime content. Tony should not answer as commander. Direct Telegram owner proof was not re-run in this pass, so that remains an owner-channel validation item.

16. Hermes Status

- `hermes-gateway.service`: active.
- Hermes status route: authenticated 200.
- Hermes test-chat route: production returns 405.
- `hermes\_called:true`: not proven.
- Agent Zero-Hermes collaboration route: production returns 405.
- Hermes is not GO. It is pending production restart/live adapter proof.

17. Voice / Telegram Status

Agent Zero voice ownership was previously moved to Agent Zero in ClaudeClaw commits. Current pass did not run a live Telegram owner prompt or voice playback proof. If the visible Telegram bot name still says Tony, BotFather rename is external and owner-controlled.

18. Tests and Validation

Mission Control:

- Typecheck passed.
- Build passed.
- Tests passed: 99 files, 1041 tests.
- Agent Zero 10,000-scenario full ecosystem gauntlet passed with 0 failures.
- Agent Zero/Hermes collaboration unit tests passed.
- Agent Zero report delivery tests passed.
- Agent Network hierarchy tests passed.

ClaudeClaw:

- Typecheck passed.
- Build passed.
- Tests passed: 61 files, 1213 passed, 4 skipped.
- Design-lock verification passed.
- 100,000-scenario dry gauntlet passed with 0 hard-fail leaks.

19. Service Status

- ``mission-control.service``: active.
- ``claudeclaw.service``: active.
- ``opencloud-docs-farmer.timer``: active.
- ``opencloud-docs-farmer.service``: inactive.
- ``hermes-gateway.service``: active.
- Agent Zero container: running.

20. Git Status and Commits

Mission Control branch: ``to-knowledge-mc``, ahead of remote by 3 before this final report commit.

Recent Mission Control commits:

- ``6c45ed0`` - ``feat(skills): finalize agent zero hermes shared skill registry``
- ``e4148d3`` - ``docs(agents): record agent zero live-query proof``
- ``b5a6dc9`` - ``docs(agents): add agent zero hermes 24h baseline``

ClaudeClaw branch: ``master``.

Recent ClaudeClaw commits include Agent Zero profile/Telegram/voice work. ClaudeClaw has many pre-existing parked deletions/untracked runtime artifacts; they were not touched.

Dirty tree:

- Mission Control: 90 pre-existing untracked parked artifacts remain.
- ClaudeClaw: 93 pre-existing dirty/parked runtime artifacts remain.
- No `.env`` changes were made in this pass.

Rollback commands:

- Revert skill registry commit: ``git revert 6c45ed0``.
- Revert final report commit: use the final report commit hash and run ``git revert <hash>``.
- Production restart rollback, if needed after deployment: restart the prior known service build through the approved admin path.

21. Security Confirmation

- No secrets printed.
- No auth files printed.
- No `.env`` changes made.
- No secret values committed.
- No auth weakening performed.
- No Tailscale/auth bypass performed.
- No raw root shell or Docker socket access granted to Agent Zero or Hermes.
- No Zapier writes run.
- No HeyGen generation run.
- No SMB mount run.
- No external farmer run.
- Build-Wiki Run Now was not executed in this pass.

22. Final Recommendation

B. Agent Zero is partially ready; fix these remaining blockers before deep Hermes onboarding.

Exact blockers:

1. Admin-restart production Mission Control so commit ``6c45ed0`` and the Hermes POST routes are live.
2. Re-run production Agent Zero skill prompts after restart.
3. Fix Hermes test-chat so production returns 200 with ``hermes_called:true`` or 503 with exact blocker.
4. Prove Agent Zero-to-Hermes collaboration live.
5. Open owner-approved Bridge Session and prove one safe report/delivery action.
6. Finish or formally waive Drive/OneDrive/AgentMail live delivery proofs.
7. Re-auth Zapier MCP OAuth if Zapier tool/schema live access is required.

8. Configure Firecrawl if crawler use is required.
9. Leave OpenCloud intact until replacement/decommission proof is complete.
10. Clean parked artifacts in a separate cleanup phase.

23. Exact Next Step

Restart production Mission Control through the approved admin method, then rerun:

1. Agent Zero status and test-chat.
2. Hermes status and test-chat.
3. Agent Zero skill prompt proof.
4. Agent Zero-Hermes collaboration proof.
5. Bridge Session safe report delivery proof.

Do not move deeply into Hermes until Hermes production test-chat returns ``hermes_called:true`` or a precise safe blocker.
