

Phase 6 — YouTube Transcript Connector Proof

Generated: 2026-05-08T00:25:59Z

Result

****Status:**** LIMITED / REQUEST BLOCKED

Exact blocker: `youtube\_transcript\_request\_blocked\_by\_youtube`.

The server has a transcript-capable Python package, but the live transcript fetch against a public YouTube video did not produce a transcript packet. No full video was downloaded, no login boundary was bypassed, and no cookie/proxy workaround was used.

Connector Check

Check	Result
youtube_transcript_api` package present	true
yt-dlp` available for metadata-only checks	true
Public test video	public YouTube video with expected captions
Transcript attempt status	blocked
Transcript error type	RequestBlocked
Transcript segment count	0
Full video downloaded	false
Login/cookie/proxy workaround used	false

Mission Control / SpaceAgent Route State

Route	Auth state	HTTP	Result
GET /api/gateway/space-agent/browser/status	unauthenticated	401	Unauthorized

Authenticated YouTube route proof remains pending until an owner/operator session or approved route credential is available.

Packet Decision

No transcript-backed YouTubeResearchPacket was produced. The correct SpaceAgent state remains limited until a production Gateway route can fetch metadata/transcript safely and return transcript-backed claims without downloading video or bypassing restrictions.

Guardrails Confirmed

- No full YouTube video was downloaded.

- No age restriction, region restriction, login wall, copyright control, or paywall was bypassed.
- No owner cookies or browser profile were used.
- No external write was executed.
- No secrets, auth files, raw paths, or task IDs were printed.
- OpenClaw+ naming remains correct.

Phase 6 Decision

Phase 6 remains ****LIMITED / BLOCKED**** with `youtube\_transcript\_request\_blocked\_by\_youtube`.
