Day 14 - Mission Control Navigation / Back 100% Closure

Date: 2026-05-09

Branch: to-knowledge-mc

Lane: Mission Control Navigation / Back

Status: DEVELOPER-SIDE CLOSED

Blocker class: OWNER_GATED for authenticated owner navigation/back confirmation

Code commit: b7bd95d

Rollback: git revert b7bd95d

Scope

Day 14 closes the developer-side navigation defect where Mission Control panel navigation and legacy aliases could keep owners in old designer or compatibility routes instead of live Mission Control and Gateway FULL v3 surfaces.

This is not owner visual GO. Authenticated owner retest remains required before the Gateway/Mission Control visual lane can move beyond PARTIAL GO.

Inventory Findings

Navigation surfaces inspected:

- src/lib/navigation.ts
 - 'panelHref()' was still mostly direct-path based.
 - route transitions used 'router.push(href, { scroll: false })', which could preserve awkward/trapped scroll positions across page transitions.
- src/app/[...panel]/route.ts
 - root/default Mission Control panels still returned the old designer Mission Control HTML route.
 - Gateway aliases were already redirected to Gateway/Agent Hub but needed regression coverage alongside the home exit.
- src/app/gateway-route-alias.test.ts
 - covered Gateway compatibility aliases but did not cover root/home/overview.
- Gateway FULL v3 designer routes
 - already exist as protected routes and remain the source of visual truth.

What Was Implemented

- Added canonical Mission Control panel route overrides:
 - 'overview', 'mission', 'dashboard' -> '/tkmc'
 - 'gateway' -> '/gateway'
 - 'gateway-parent', 'agents', 'agent-network' -> '/gateway/agent-hub'
 - 'gateways' -> '/gateway'
 - 'gateway-config' -> '/gateway/policies'
 - settings/admin panels -> concrete '/settings/tkmc/...' routes
- Changed panel navigation route pushes to reset scroll:
 - from: 'router.push(href, { scroll: false })'
 - to: 'router.push(href, { scroll: true })'
- Changed catch-all Mission Control panel redirects so root/home/overview/default routes land on '/tkmc' instead of the old designer Mission Control shell.
- Added regression tests for:
 - root Mission Control -> '/tkmc'
 - overview panel -> '/tkmc'
 - concrete Gateway FULL v3 routes
 - concrete settings/admin routes
 - no return to 'scroll: false'

Files Changed

- src/lib/navigation.ts
- src/lib/navigation.test.ts

- src/app/[...panel]]/route.ts
- src/app/gateway-route-alias.test.ts

No designer mock HTML, shared tokens, Gateway FULL v3 classes, '.env', credentials, governance files, or parked artifacts were changed.

Routes / UI Behavior

Expected behavior after this change:

- Mission Control Home exits target '/tkmc'.
- Gateway Overview exits target '/gateway'.
- Agent Hub exits target '/gateway/agent-hub'.
- Old aliases still land safely:
 - '/agents' -> Gateway Agent Hub after authentication
 - '/agent-network' -> Gateway Agent Hub after authentication
 - '/gateway-parent' -> Gateway Agent Hub after authentication
 - '/gateways' -> Gateway Overview after authentication
 - '/gateway-config' -> Gateway Policies after authentication
- Route changes reset scroll instead of preserving a prior trapped position.
- Protected route behavior is preserved.

Runtime / Deployment

Source commit pushed:

- b7bd95d

Standalone deployment:

- Build/deploy script rebuilt commit b7bd95d.
- The deploy script reported:
 - deployed commit: b7bd95d
 - pid: 41874
 - port: 3337
- The deploy child exited before route smoke, matching the known standalone child-exit behavior in this local proof environment.
- Controlled proof runtime was started in a local-only screen-backed process:
 - host: 127.0.0.1
 - port: 3337
 - pid: 42107
 - restart timestamp: Sat May 9 11:48:57 2026

This proof runtime was local-only. No public listener was added.

Route Smoke

Smoke base: http://127.0.0.1:3337

Unauthenticated route behavior:

- '/login': 200
- '/': 307 to '/login'
- '/overview': 307 to '/login'
- '/tkmc': 307 to '/login'
- '/gateway': 307 to '/login'
- '/gateway/agent-hub': 307 to '/login'
- '/agents': 307 to '/login'
- '/agent-network': 307 to '/login'
- '/gateway-parent': 307 to '/login'
- '/gateways': 307 to '/login'
- '/gateway-config': 307 to '/login'
- '/settings/tkmc': 307 to '/login'
- '/settings/tkmc/security': 307 to '/login'

Route-handler unit proof confirms the post-auth navigation targets:

- '/' redirects to '/tkmc'
- '/overview' redirects to '/tkmc'
- Gateway aliases redirect to the intended Gateway FULL v3 surfaces.

Protected action invariant:

- scripts/check-protected-actions-locked.mjs against http://127.0.0.1:3337
- ok: true
- checked: 11
- protected actions remained locked.

Authenticated owner navigation proof:

- Not performed because this runtime does not have an owner browser session.
- Remaining blocker: owner_authenticated_navigation_retest_required

Tests Run

- pnpm test src/lib/navigation.test.ts src/app/gateway-route-alias.test.ts
 - 2 files passed
 - 13 tests passed
- git diff --check
 - passed
- pnpm run typecheck
 - passed
- pnpm run build
 - passed
- pnpm test
 - 146 files passed
 - 1291 tests passed
- node scripts/check-protected-file-invariants.mjs
 - ok: true
- staged secret scan
 - ok: true
 - checked files: 4
- .env diff check
 - clean

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure added.
- No fake owner visual proof.
- No fake GO.
- No fake buttons added.
- No designer mock redesign.
- No Gateway FULL v3 token/class changes.
- No parked artifacts staged.
- Final proof runtime bound to 127.0.0.1 only.

Remaining Blocker

Blocker: owner_authenticated_navigation_retest_required

Classification: OWNER_GATED

Owner retest needed:

- Log in to Mission Control.

- Open '/tkmc'.
- Open '/gateway'.
- Open '/gateway/agent-hub'.
- Use Mission Control Home, Gateway Overview, Agent Hub, and browser back.
- Confirm the owner is not trapped in Agent Hub.
- Confirm scroll position resets naturally when moving between pages.

Closeout Ledger

- Day number and lane: Day 14 - Mission Control Navigation / Back
- Status: DEVELOPER-SIDE CLOSED
- Blocker classification: OWNER_GATED
- Commit hash: b7bd95d
- Push result: pushed to origin/to-knowledge-mc
- Deployed commit: b7bd95d
- Runtime proof: local-only standalone proof on 127.0.0.1:3337, pid 42107
- Rollback command: git revert b7bd95d
- Next day automatically started: Day 15 - Gateway Native Implementation Decision 100% Closure
