

Day 63 â Production Deployment Pipeline

Date: 2026-05-10

Lane: Runtime / deployment

Status: PARTIAL GO â developer-side deployment proof harness complete; production redeploy remains owner/runtime gated if the remote service manager is not available from this session.

Blocker class: OWNER_GATED for remote production service restart; NONE for local standalone proof.

Objective

Close the deployment-pipeline work package by proving Mission Control can be rebuilt, served through the standalone bundle, checked for protected routing, and verified without public local exposure or secret output.

What Changed

- 'scripts/deploy-standalone.sh' now defaults Mission Control standalone deploys to '127.0.0.1' unless 'MC_HOSTNAME' is explicitly set by the service manager.
- 'scripts/start-standalone.sh' now defaults standalone startup to '127.0.0.1' unless 'MC_HOSTNAME' is explicitly set.
- 'scripts/check-standalone-deploy-proof.mjs' adds a safe deployment proof harness.

Proof Artifacts

- 'runtime/day-63-standalone-deploy-proof.json'
- 'runtime/day-63-route-rendering-smoke.json'

Deployment Proof Result

'runtime/day-63-standalone-deploy-proof.json' returned 'ok: true'.

- Source branch: 'to-knowledge-mc'
- Source commit at proof time: 'c5461b2'
- Base URL checked: 'http://127.0.0.1:3337'
- Standalone bundle: present
- Listener: present on port '3337'
- Restart proof: active listener PID matched '.next/standalone/server.pid'
- Bind proof: standalone startup reported 'http://127.0.0.1:3337'
- '/login': '200', rendered Mission Control HTML
- Rendered static asset: served with 'text/css'
- '/gateway' unauthenticated: '307' to '/login'
- Authenticated connector readiness: '200', 10 connectors, 0 execution enabled, 0 writes enabled
- Public local exposure added: no

Route Smoke Result

'runtime/day-63-route-rendering-smoke.json' returned 'ok: true'.

- Routes checked: 46
- Designer pages checked: 8
- Failures: 0
- API auth: x-api-key provided from runtime smoke environment

UI / Owner Behavior

No UI redesign was performed in this lane.

The deployment proof confirms that the current runtime serves the Mission Control login shell, static Next assets, and protected Gateway routes. It does not mark Gateway visual fidelity as GO; owner visual acceptance remains a separate UI lane.

Service / Runtime Behavior

- Local standalone proof ran on '127.0.0.1:3337'.
- The proof harness does not execute writes, delivery sends, uploads, Zapier actions, HeyGen generation, SMB/Fork 2, or external farmers.
- Restart testing found that Bash pre-populates 'HOSTNAME' with the machine name, so the final script uses 'MC_HOSTNAME' for approved overrides and exports Next.js 'HOSTNAME' from that safe variable.

lue.

- The harness reads the runtime smoke key from environment/DB but reports only 'api_auth_configured: true', never the key.

Tests / Checks

Initial narrow checks completed before the report:

- 'node --check scripts/check-standalone-deploy-proof.mjs' â PASS
- deployment default guard for '127.0.0.1' â PASS
- 'node scripts/check-standalone-deploy-proof.mjs http://127.0.0.1:3337' with runtime smoke env â PASS
- 'node scripts/check-mission-control-route-rendering.mjs http://127.0.0.1:3337' with runtime smoke env â PASS

Full validation gate to run before commit:

- 'git diff --check'
- 'pnpm run typecheck'
- 'pnpm run build'
- 'pnpm test'
- 'node scripts/check-protected-file-invariants.mjs'
- staged secret scan
- '.env' diff check

Remaining Blockers

- Remote production restart/deploy proof is OWNER_GATED if this session cannot safely operate the remote service manager.
- The Gateway owner visual lane is not changed by this report and remains dependent on owner rest/acceptance of the mounted FULL v3 design surface.

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure added.
- No fake GO.
- No fake Done.
- No fake buttons.
- No connector execution or external write.

Rollback

After commit:

```
""bash
git revert <day-63-production-deployment-pipeline-commit>
MC_HOSTNAME=127.0.0.1 PORT=3337 bash scripts/start-standalone.sh
""
```

Next Day Started

After the Day 63 validation gate and commit/push, Day 64 â Runtime Health Dashboard starts automatically.
