

gateway-v3-owner-authenticated-visual-proof

Gateway FULL v3 Visibility â Owner-Authenticated Visual Proof

Goal

Confirm the owner can see the Gateway FULL v3 interface in an authenticated Mission Control browser session.

Result

BLOCKED (cannot mark GO without owner-authenticated confirmation evidence).

Blocker

'owner_authenticated_browser_session_required'

Why This Is Still Blocked

- Production route and alias checks are passing.
- Gateway FULL v3 routing fix ('8972a3d') is in branch lineage.
- But visual GO requires authenticated owner confirmation/screenshots of the actual interface.

Owner Proof Checklist (Required)

After logging in, open:

1. '/gateway'
2. '/gateway/agent-hub'

Confirm visible Gateway rail tabs:

- Overview
- Routes
- Registry
- Policies / Bridge
- Health
- Dispatcher
- Token Governor
- Agent Hub

Confirm Agent Hub cards include:

- Agent Zero
- Hermes
- Pi
- SpaceAgent
- Paperclip
- OpenClaw+

Confirm presentation rules:

- Paperclip appears before OpenClaw+ in the operating chain
- No OpenCloud architecture label (except literal legacy service name 'opencloud-docs-farmer.service')
- No fake buttons
- No raw local paths
- No secrets

Immediate Owner Retry Steps (Cache-Safe)

1. Hard refresh while on '/gateway' ('Cmd+Shift+R' on macOS).
2. Directly open '/gateway/agent-hub'.
3. Verify '/agent-network' and '/agents' now land on Gateway Agent Hub surface.

Codex Verification After Owner Confirmation

Once owner confirms or provides screenshot evidence, Codex will:

1. Validate tab rail visibility and labels.
2. Validate Agent Hub card ordering and alias landing behavior.
3. Reclassify owner visual proof status from BLOCKED to GO/PARTIAL based on evidence.

Safety Confirmation

- No secret/token values requested
- No '.env' changes

- No auth weakening
- No public exposure changes
