

NEXT-6 â Validation and Push

Objective

Validate the NEXT implementation batch and ship isolated commits without '.env' changes, secret leaks, fake completion claims, or auth weakening.

Result

PASS with explicit live blockers still open.

Validation Commands

1. 'git diff --check' â PASS
2. 'pnpm run typecheck' â PASS (after rebuild regenerated '.next/types')
3. 'pnpm run build' â PASS
4. 'pnpm test -- src/lib/paperclip-bridge.test.ts' â PASS
5. 'pnpm test -- src/lib/__tests__/scan-credentials.test.ts' â PASS ('138 files / 1251 tests')
6. 'node scripts/check-button-contract-routes.mjs' â PASS
7. 'node scripts/check-protected-file-invariants.mjs' â PASS
8. '.env diff check' ('git diff -- .env .env.local .env.production') â clean

Route Smoke

- Added artifact: 'runtime/next-route-smoke-auth-unauth.json'
- Production page protection check:
 - '/gateway', '/gateway/agent-hub', '/agent-network', '/agents' returned '/login' redirects when unauthenticated.
- API smoke with locally read API key against Tailnet runtime returned '401' for both authenticated and unauthenticated checks.
- Exact blocker: 'mission_control_api_key_not_seeded' (local runtime DB key does not match active production runtime key context).

Commits

1. 'ce943fb' â 'feat(bridge): update capability matrix and delivery status contracts'
2. 'f3cfac5' â 'fix(gateway): keep exits visible and remove agent-hub scroll trap'
3. 'cd81578' â 'fix(paperclip): add tailnet fallback candidate for bridge health'

Push

- Branch: 'to-knowledge-mc'
- Remote push: PASS ('9f95d09..cd81578')

Rollback

1. 'git revert cd81578'
2. 'git revert f3cfac5'
3. 'git revert ce943fb'
4. 'git push origin to-knowledge-mc'

Safety Confirmations

- No '.env' edits.
- No secrets printed.
- No auth weakening.
- No public local exposure added.
- No fake send/upload claims.
- No fake GO/Done claims.

Current Honest Blockers

- 'owner_approval_pending'
- 'active_bridge_session_required'
- 'paperclip_owner_session_required'
- 'mission_control_api_key_not_seeded'
- 'firecrawl_credential_required'
- 'firecrawl_backend_adapter_not_configured'
- 'youtube_transcript_connector_not_proven'
- 'google_drive_upload_connector_not_configured'
- 'onedrive_upload_connector_not_configured'

Next Step

Owner approval/session lane: approve one scoped Bridge action, then rerun live execution proof and Telegram/Paperclip delivery proofs against the now-shipped code.
