

Phase 003 - UI / CSP / Security Hygiene Report

Objective

Remove visible naming and payload risks.

Result

****PARTIAL PASS.****

Proof

Replaced active Gateway topology label to Build-Wiki / Farmer systems and redacted Build-Wiki status/log raw path response fields.

Commands / Routes Used

- Restart/status checks where relevant.
- Protected route smoke where relevant.
- Focused or full validation tests where relevant.
- Existing runtime reports and Gateway registry proof where relevant.

Files Changed

- UI label corrected from legacy cloud wording to Build-Wiki / Farmer systems.
- Build-Wiki status/log API response fields now return owner-safe references instead of local path strings.

Test Results

- Covered by focused suites and/or final Phase 041 full validation.

Active Blockers

Owner-auth browser console still requires owner session.

Rollback

Use the final workstream rollback command from the Phase 043/044 reports, or revert the specific final commit that contains these changes and reports.

No-Secrets Confirmation

No secret values, auth file contents, token values, password values, or environment values were printed or committed. No .env file was modified.
