Tony Delete Final Decision Report

Final Decision
PARTIAL GO

Why Not Full GO Yet

Remaining owner/admin-gated proof items are still open:

- 'owner_authenticated_browser_session_required'
- 'mission_control_api_key_not_seeded' for this runner's authenticated production probe path
- 'owner_approval_pending' / 'active_bridge_session_required' for one live approved execution proof
- optional branding cleanup if Telegram bot display name still carries old Tony branding ('owner_BotFather_rename_required')

1) Active Tony References Before Deletion

- Gateway role matrix node
- Agent Hub policy/fact labels
- Provider fallback projection
- Capability matrix retired-agents section
- Agent Zero/Hermes owner-facing wording
- Runtime identity fallback defaults
- Tony-branded report contract function name

2) What Was Removed

- Tony active node from Gateway role matrix.
- Tony owner-facing labels from active Agent Hub/Gateway surfaces.
- Tony provider projection from active provider payload.
- Tony retired row from current capability matrix payload.
- Tony defaults in runtime service identity fallback.

3) What Was Migrated

- 'buildTonyReportCreationContract' -> 'buildReportCreationContract'
- Legacy compatibility normalization mapped to neutral legacy-deleted controller wording.
- Controller response contracts updated to Agent Zero-centric active authority messaging.

4) Historical-Only Remaining

- Historical runtime reports/artifacts and some design archive files still contain legacy Tony language.
- These are not used as active runtime route targets after this batch.

5) Telegram Route Result

- Active Telegram route namespace remains Agent Zero ('/api/bridge/agent-zero/telegram/*').
- Live send proof remains Bridge/owner approval gated.

6) Bot Display Name Status

- Runtime routing is separate from BotFather display metadata.
- Owner-side rename may still be required if display branding has not been updated.

7) Voice Route Result

- Active fallback runtime identity now defaults to Agent Zero for 'claudeclaw.service'.

8) Gateway / Agent Hub Result

- Active chain shows Owner -> Gateway -> Agent Zero/Pi/Hermes -> Paperclip -> OpenClaw+.
- Tony removed from active role matrix and owner-visible control labels.

9) Report Template Result

- Active report contract naming and aliases removed Tony-brand dependency.

10) Tests Passed

- Typecheck: PASS
- Build: PASS
- Tests: PASS ('138' files / '1250' tests)

- Protected-file invariant scan: PASS

11) Gauntlet Result

- Agent Zero gauntlet (10,000 scenarios): PASS
- Paperclip routing gauntlet (1,000 scenarios): PASS

12) Services Restarted

- Not restarted in this report snapshot.
- Code/report batch has been pushed; owner-session-based production visual/live-action confirmation remains the gating item.

13) Commits Pushed

- '43e9405' â 'refactor(runtime): remove Tony from active controller, UI, and routing surfaces'
- 'de5c0f4' â 'docs(runtime): add Tony deletion phase reports and final decision package'

14) Rollback Commands

- 'git revert de5c0f4'
- 'git revert 43e9405'

15) No-Secrets Confirmation

- No secrets printed.
- No auth file contents printed.
- No '.env' changes.

16) Final Status Summary

- Tony is removed from active code paths and owner-facing active surfaces in this implementation batch.
- Final GO is pending owner/session-gated production confirmations (owner-authenticated visual proof + one approved scoped execution proof).
