

Gateway UI Direct Mock Mount Report

Objective

Confirm direct FULL v3 mock mounting remains the active rendering path.

Route-to-Mock Mapping

- '/gateway' -> 'Gateway Overview.html'
- '/gateway/agent-hub' -> 'Agent Hub.html'
- '/gateway/agent-hub/paperclip' -> 'Paperclip.html'
- '/gateway/routes' -> 'Gateway Routes.html'
- '/gateway/registry' -> 'Gateway Registry.html'
- '/gateway/policies' -> 'Gateway Policies.html'
- '/gateway/health' -> 'Gateway Health.html'
- '/gateway/dispatcher' -> 'Dispatcher.html'
- '/gateway/token-governor' -> 'Token Governor.html'
- '/gateway/bridge-session' -> 'Bridge Session Flow.html'
- '/gateway/node-detail' -> 'Gateway Node Detail.html'
- '/gateway/mobile-tablet' -> 'Gateway Mobile Tablet.html'

Mount Mechanism

- Component: 'src/components/gateway/DesignerGatewayMockFrame.tsx'
- Source URL base: '/designer-mission-control/design/gateway/'

Hydration Note

- Agent Hub shared data path still supports live status hydration flow through existing status endpoint wiring.
- No fake "connected" status added where backend proof is missing.

Blocker

- Owner visual retest pending after deploy/restart.

No-Secrets Confirmation

- No secret values printed.
- No '.env' changes.

Next Step

Deploy current commit and ask owner to validate mounted FULL v3 pages in authenticated session.
