

Gateway UI Exit Navigation Fix Report

Objective

Ensure owners are not trapped in Agent Hub and can always navigate out without browser back.

Actions

Added explicit navigation controls above the mounted mock frame:

1. 'Mission Control Home' -> '/tkmc'
2. 'Gateway Overview' -> '/gateway'
3. 'Agent Hub' -> '/gateway/agent-hub'
4. Clickable breadcrumb:
 - 'Mission Control / Gateway / <Current Page>'

File Changed

- 'src/components/gateway/DesignerGatewayMockFrame.tsx'

Behavior Outcome

- Exit controls are visible above the fold.
- Controls are route-based and do not depend on browser back navigation.
- Alias entry points ('/agent-network', '/agents') still land on Gateway Agent Hub route path.

Safety

- No fake action buttons introduced.
- No auth weakening.
- No raw local path surfaced in UI text.

Blocker

- Owner confirmation still required in production browser session.

Next Step

Deploy + owner retest:

- open '/gateway/agent-hub'
- verify scroll
- verify exit controls work as expected.
