

Gateway UI Scroll Defect Reproduction Report

Objective

Reproduce and identify the exact scroll/container defect reported by owner on '/gateway/agent-hub'.

Actions

1. Reviewed active Gateway route components and wrapper stack.
2. Inspected Gateway mount component and page wrappers.
3. Checked for scroll-trap patterns ('h-screen', 'overflow-hidden', fixed viewport locking).

Commands / Routes

- 'sed -n '1,260p' src/components/gateway/DesignerGatewayMockFrame.tsx'
- 'sed -n '1,220p' src/app/gateway/agent-hub/page.tsx'
- 'rg -n "overflow-hidden|h-screen|100vh|position:\s*fixed" src/app src/components'

Exact Defect Source

- File: 'src/components/gateway/DesignerGatewayMockFrame.tsx'
- Offending wrapper: '<main className='h-screen w-full overflow-hidden ...'>'
- Effect: hard viewport lock around iframe mount, causing trapped-scroll behavior in owner flow.

Proof

- Wrapper was fixed-height ('h-screen') and clipping ('overflow-hidden').
- Owner symptom ("stuck/static/trapped frame") matches this lock pattern in production-style shell.

Blocker / Status

- Status updated: 'owner_visual_proof_partial_navigation_layout_defect'
- Gateway owner visual lane remains PARTIAL GO pending owner retest after deployment.

No-Secrets Confirmation

- No secrets printed.
- No auth file contents printed.
- No '.env' changes made.

Next Step

Apply scroll-trap removal + visible exit navigation and redeploy for owner retest.
