

Phase 18 — Parked Artifact Cleanup Classification

Generated: 2026-05-07 21:20:44

Result

****PARTIAL GO / classification only.**** No files were deleted or moved. Mission Control has only two untracked public artifacts. ClaudeClaw/OpenClaw+ has a large pre-existing dirty tree with runtime reports, logs, backups, scripts, and evidence. Because the owner explicitly prohibited deleting OpenClaw+ runtime data, skills, agents, reports, memory, governance, and evidence, cleanup was limited to classification and recommendations.

Mission Control Artifacts

Artifact	Category	Size	Recommendation	Action Taken
---	---	---	---	---
`public/Voice-Biometrics-Executive-Report.pdf`	public report artifact	12K	keep or move through a deliberate report-publication task	none
`public/lu-ai-collab-v2.mp4`	public media artifact	4.4M	keep if linked by UI; otherwise archive in a separate cleanup task	none

Mission Control working tree status after Phase 17 commit:

- Untracked artifacts: 2
- Modified tracked files: 0
- Deleted tracked files: 0

ClaudeClaw / OpenClaw+ Artifacts

Observed dirty tree summary:

- Total short-status entries: 93
- Tracked runtime report deletions: 73
- Untracked status entries: 20
- Untracked file count under ignored-directory expansion: 428

Categories:

Category	Examples	Recommendation	Action Taken
---	---	---	---
Historical runtime reports	deleted `runtime/*.md` report files	review against report archive before restore/delete	none
JSONL runtime ledgers	brain-write audit, file handoffs, Telegram handoffs	keep; runtime evidence	none
Backups	legacy sender backups, Telegram allowlist backups	keep/archive only after owner-approved retention policy	none

| Debug scripts | test Tony reliability scripts, ElevenLabs debug script | review separately; do not commit with Gateway fixes | none |

| Executive report/media artifacts | PDFs and executive reports | keep until report-publication cleanup is approved | none |

| Local Codex metadata | `.codex` | do not commit without explicit policy | none |

Cleanup Decision

No deletion was performed because:

- The artifacts are pre-existing and unrelated to the current production fixes.
- Some artifacts are runtime evidence, audit logs, backups, or historical records.
- The owner prohibited deleting OpenClaw+ runtime data, reports, skills, agents, governance, memory, or evidence.
- Mixing cleanup with production Gateway/Agent Zero/Hermes work would make rollback riskier.

Security Confirmation

- No secrets printed.
- No auth files printed.
- No `.env` files staged or changed.
- No runtime data deleted.
- No OpenClaw+ data deleted.
- No Build-Wiki / Farmer data deleted.
- No SMB/Fork 2.
- No external farmers.

Remaining Blockers

- `owner\_retention\_policy\_required`: ClaudeClaw/OpenClaw+ cleanup needs an explicit keep/archive/delete policy per artifact family.
- `do\_not\_mix\_cleanup\_with\_production\_fixes`: cleanup should be performed on its own branch/phase after production blockers close.
- `report\_publication\_policy\_required`: public media/report artifacts need owner confirmation before moving or archiving.

Next Step

Proceed to Phase 19: full validation.
