Day 70 â Monitoring / Failure States

Date: 2026-05-11

Status: PASS â developer-side implementation and local runtime proof complete

Blocker class: NONE for developer-side Day 70 closure

Lane

Monitoring / failure states across Mission Control runtime, core agents, Bridge, delivery connectors, and external tools.

What Was Implemented

- Added a canonical monitoring failure-state model backed by the existing owner-facing status contract.
- Added protected 'GET /api/runtime/failure-states'.
- Added runtime surfaces for Mission Control runtime, Agent Zero, Hermes, Pi, Paperclip, OpenClaus, SpaceAgent, Bridge Session, Build-Wiki Run Now, Telegram, AgentMail, Google Drive, OneDrive, Zapier, HeyGen, and Gateway Route Smoke.
- Added failure-state catalog for: OWNER_GATED, CREDENTIAL_GATED, SERVICE_DOWN, BACKEND_MISSING, ROUTE_MISSING, AUTH_REQUIRED, EXECUTION_DISABLED, WRITE_DISABLED, EXTERNAL_WRITE_DISABLED, UNKNOWN.
- Added route smoke coverage for the new protected endpoint in both unauthenticated and authenticated smoke inventories.

Files Changed

- 'src/lib/monitoring-failure-states.ts'
- 'src/lib/monitoring-failure-states.test.ts'
- 'src/app/api/runtime/failure-states/route.ts'
- 'src/app/api/runtime/failure-states/route.test.ts'
- 'scripts/protected-route-smoke-contract.mjs'
- 'scripts/authenticated-route-smoke-contract.mjs'
- 'src/lib/protected-route-smoke-contract.test.ts'
- 'src/lib/authenticated-route-smoke-contract.test.ts'

Routes / Endpoints Changed

- Added 'GET /api/runtime/failure-states'.
- Added '/api/runtime/failure-states' to protected route smoke inventory.
- Added '/api/runtime/failure-states' to authenticated route smoke inventory.

UI / Owner-Facing Behavior

- No raw JSON owner UI was added.
- No fake LIVE status was added.
- The endpoint returns normalized owner-facing status descriptors only.
- Protected/auth-required surfaces report OWNER_GATED with AUTH_REQUIRED failure detail instead of fake live status.
- Paperclip reports SERVICE_DOWN when the known sandbox service is not running.
- Build-Wiki Run Now reports OWNER_GATED and remains approval-gated.
- Zapier and AgentMail external writes report disabled unless scoped by Bridge Session.

Service / Runtime Behavior

- Local standalone was rebuilt and restarted on '127.0.0.1:3337' only.
- New runtime PID observed: '34165'.
- No public exposure was added.
- Runtime proof for '/api/runtime/failure-states' returned HTTP 200 with standalone auth store and no key printed.

Runtime Proof Summary

Proof artifact: 'runtime/day-70-monitoring-failure-states-proof.json'

Observed summary from local runtime:

- Runtime: LIVE
- Surfaces checked: 16
- LIVE: 1

- OWNER_GATED: 9
- CREDENTIAL_GATED: 2
- SERVICE_DOWN: 1 (Paperclip sandbox service not running)
- DISABLED: 3
- No fake live status: true
- No external writes executed: true

Tests / Checks Run

- 'pnpm test src/lib/monitoring-failure-states.test.ts'
- 'pnpm test src/lib/monitoring-failure-states.test.ts src/app/api/runtime/failure-states/route.test.ts src/lib/protected-route-smoke-contract.test.ts src/lib/authenticated-route-smoke-contract.test.ts'
- 'pnpm run typecheck'
- 'pnpm run build'
- 'pnpm test' â 189 files / 1448 tests passed
- Final 'pnpm run build' after Paperclip classifier correction
- Local-only standalone restart on '127.0.0.1:3337', PID '69803'
- Authenticated local runtime proof: 'GET /api/runtime/failure-states' returned HTTP 200 using standalone auth store without printing the key

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No external writes.
- No Zapier writes.
- No SMB/Fork 2.
- No designer Gateway HTML/CSS/class changes.

Rollback

Use:

```
""bash
git revert <day-70-monitoring-failure-states-commit-sha>
MC_HOSTNAME=127.0.0.1 PORT=3337 bash scripts/start-standalone.sh
""
```

Next Day Started

Day 71 â Production Restart Proof starts automatically after Day 70 commit/push.
