

Phase 11 - Mini-Agent OS Production Bridge Report

Generated: 2026-05-07T21:09:18-04:00

Result

****PARTIAL GO / PROPOSAL FLOW READY, ACTIVATION GATED****

The mini-agent operating system contracts are implemented and tested for safe proposal, supervision, memory TTL, routing, and audit behavior. Live activation remains intentionally gated by Gateway policy, Bridge Session, and registered runtime adapter proof.

Verified Requirements

Requirement	Result
MiniAgentDefinition schema	pass
MiniAgentMemory schema	pass
Parent supervisor required	pass
Scope required	pass
Allowed tools assigned	pass
Forbidden tools enforced	pass
Memory TTL required	pass
Output contract required	pass
Kill/expire condition required	pass
Audit trail required	pass
Secret storage blocked	pass
Memory isolation between mini-agents	pass
Mini-agent self-promotion blocked	pass
Agent Zero request path	pass, proposal only
Hermes design path	pass, proposal only
Pi recommendation path	pass, shadow/advisory only
Activation	Bridge Session gated

Route Protection Smoke

Unauthenticated route checks after Mission Control restart:

Route	Result	Meaning
GET /api/gateway/mini-agents	401	protected
GET /api/gateway/mini-agents/status	401	protected
GET /api/gateway/nodes/mini-agents	401	protected

Tests

Test	Result
src/lib/gateway-mini-agent-contracts.test.ts	5 passed
src/lib/gateway-mini-agent-os.test.ts	8 passed
src/lib/gateway-mini-agent-gauntlet.test.ts	1 passed
Combined focused tests	14 passed

Execution Policy

Actor	Authority
Owner	final authority
Gateway	validates route/policy/audit
Agent Zero	commander and final activation reviewer
Hermes	designs skills/workflows/mini-agent specs
Pi	recommends routes only in shadow/advisory mode
Paperclip	organizes workforce/task metadata before OpenClaw+
OpenClaw+	runtime/skills/agents execution layer after approval
Mini-agent	subordinate scoped worker only

Security Confirmation

- No secrets printed.
- No auth files printed.
- No `.env`` changes.
- No mini-agent activation occurred.
- No mini-agent self-promotion path exists in the tested contract.
- No external writes, uploads, Zapier, HeyGen, SMB, or farmer execution occurred.

Updated Percentage

System	Previous	Updated
Mini-agent OS	partial/read-only	78% PARTIAL GO
Pi dispatcher support	pending/shadow	62% PARTIAL shadow

Mini-agent proposal and planning are strong; execution remains correctly gated.

Exact Remaining Blockers

- `bridge\_session\_required\_for\_mini\_agent\_activation`
- `registered\_runtime\_adapter\_required\_for\_execution`
- `owner\_authenticated\_route\_proof\_required`

Exact Next Step

Run authenticated owner/operator route smoke and then prove one scoped Bridge Session activation dry-run through OpenClaw+ runtime without external writes.

Rollback

This phase changed only reports. Rollback command after commit:

```
`git revert <phase-11-commit>`
```
