Day 72 â Runtime Final Closeout

Date: 2026-05-11

Status: PARTIAL GO â runtime/developer-side proof complete; owner-authenticated smoke remains OWNER_GATED

Blocker class: OWNER_GATED

Lane

Runtime / deployment / security final closeout for Days 63â 71.

What Was Implemented

- Added a runtime final closeout contract that consolidates the runtime/deployment/security lane s.
- Added tests that prevent a fake GO when authenticated owner visual proof is not actually proven.
- Generated the final runtime closeout proof matrix from existing Day 63â 71 artifacts.

Files Changed

- 'src/lib/runtime-final-closeout-contract.ts'
- 'src/lib/runtime-final-closeout-contract.test.ts'
- 'runtime/day-72-runtime-final-closeout-proof.json'
- 'runtime/day-72-runtime-final-closeout.md'
- 'runtime/day-72-runtime-final-closeout.pdf'

Proof Matrix

Proof artifact: 'runtime/day-72-runtime-final-closeout-proof.json'

Included lanes:

- Day 63 deployment pipeline
- Day 64 runtime health dashboard
- Day 65 protected route smoke
- Day 66 authenticated route smoke
- Day 67 secret scan
- Day 68 raw path / public exposure sweep
- Day 69 rollback plan
- Day 70 monitoring / failure states
- Day 71 production restart proof

Result

- Final runtime closeout status: PARTIAL GO
- Overall proof artifact 'ok': true
- Failures: none
- Owner-gated lanes: 'authenticated_route_smoke'
- No fake GO: true
- No fake Done: true
- No public exposure added: true
- No external writes executed: true

Why Not GO

Authenticated owner visual smoke is still OWNER_GATED because no owner browser session/cookie was provided for this proof lane. The harness is complete and does not claim owner visual proof. This keeps the closeout honest.

Runtime / Service Behavior

- Local Mission Control remains on '127.0.0.1:3337'.
- Latest restart proof showed PID change and live runtime health.
- Runtime health is LIVE.
- Protected routes are blocked unauthenticated.
- Monitoring failure states are normalized and do not fake live status.

Tests / Checks Run

- 'pnpm test src/lib/runtime-final-closeout-contract.test.ts'

- Day 63 deploy proof artifact reviewed
- Day 64 runtime health artifact reviewed
- Day 70 protected route smoke artifact reviewed
- Day 66 authenticated route smoke artifact reviewed
- Day 71 secret scan artifact reviewed
- Day 70 raw path scan artifact reviewed
- Day 70 rollback plan artifact reviewed
- Day 70 monitoring failure-state artifact reviewed
- Day 71 restart proof artifact reviewed

Final validation before commit also runs:

- 'git diff --check'
- focused runtime final closeout test
- protected file invariant scan
- staged secret scan
- '.env' diff check

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure.
- No fake 100%.
- No fake Done.
- No external writes.
- No SMB/Fork 2.
- No Gateway designer mock modifications.

Rollback

Use:

```
""bash
git revert <day-72-runtime-final-closeout-commit-sha>
MC_HOSTNAME=127.0.0.1 PORT=3337 bash scripts/start-standalone.sh
""
```

Next Day Started

Day 73 â Agent Registry Integration starts automatically after Day 72 commit/push.
