

Day 04 Phase 11 â Designer Gateway Package Integration (FULL v3)

Objective

Integrate the 'Mission-Control-Gateway-FULL-v3' handoff package additively into Mission Control, preserve existing surfaces, and wire the new Gateway control-center entry path.

Input Package

- Source package: 'Mission-Control-Gateway-FULL-v3'
- Source integration notes loaded from package:
 - 'DEVELOPER-INTEGRATION-NOTE.md'
 - 'design/gateway/developer-handoff.md'
 - 'design/gateway/00-design-brief.md'

Actions Executed

1. Imported the full designer Gateway handoff assets into served static assets:
 - 'public/designer-mission-control/design/gateway/*'
 - 'public/designer-mission-control/design/DEVELOPER-INTEGRATION-NOTE.md'
2. Added additive Gateway tab shell and pages in Next app:
 - '/gateway' (Overview)
 - '/gateway/routes'
 - '/gateway/registry'
 - '/gateway/policies'
 - '/gateway/health'
 - '/gateway/dispatcher'
 - '/gateway/token-governor'
 - existing '/gateway/agent-hub' retained
3. Updated Agent Hub page to include full Gateway tab rail for the requested entry model:
 - Mission Control â Gateway â Agent Hub / Control Center.
4. Updated designer shell navigation behavior:
 - Gateway rail now routes to '/gateway' (additive entryptoint).
 - Agent Network compatibility alias still routes to '/gateway/agent-hub'.
5. Kept additive model and did not remove existing Mission Control surfaces.

Files Changed

- 'public/designer-mission-control/design/DEVELOPER-INTEGRATION-NOTE.md'
- 'public/designer-mission-control/design/gateway/*'
- 'public/designer-mission-control/src/app.jsx'
- 'public/designer-mission-control/src/replicas/WorkspaceRail.jsx'
- 'src/components/gateway/GatewayControlShell.tsx'
- 'src/app/gateway/page.tsx'
- 'src/app/gateway/routes/page.tsx'
- 'src/app/gateway/registry/page.tsx'
- 'src/app/gateway/policies/page.tsx'
- 'src/app/gateway/health/page.tsx'
- 'src/app/gateway/dispatcher/page.tsx'
- 'src/app/gateway/token-governor/page.tsx'
- 'src/components/gateway-agent-hub/AgentHubControlCenter.tsx'

Validation Commands

- 'git diff --check'
- 'pnpm run typecheck'
- 'pnpm run build'
- 'pnpm test'
- 'PORT=3337 pnpm start' (local validation server)
- 'node scripts/check-mission-control-route-rendering.mjs http://127.0.0.1:3337'
- 'curl' route probes for new Gateway pages
- changed-file secret pattern scan ('rg' pattern scan on modified/untracked files)

Validation Results

- Diff check: PASS
- Typecheck: PASS
- Build: PASS

- Tests: PASS ('138' files, '1247' tests passed)
- Route rendering smoke: PASS ('ok: true')
- New Gateway routes: PASS as auth-gated redirects ('307' to '/login', expected without owner auth session)
- Secret-pattern scan on changed files: PASS
- '.env' changes: none

Production Truth / Why Changes Were Not Visible Yet

- Root cause: designer handoff assets were not previously copied into the served static tree and full Gateway tab pages were not fully wired in app routes.
- Secondary cause: production runtime must run a build containing these changes; until deploy/restart, owner web UI will continue serving previous revision.

Blockers

- 'owner_authenticated_browser_session_required' for owner-personal visual proof.
- 'production_runtime_rollout_required' (deploy/restart required for this new code to appear in production runtime).

Safety / Hard Rules Confirmation

- No '.env' edits.
- No secret or token values printed.
- No auth weakening.
- No public exposure of local-only services.
- No destructive deletion of existing Mission Control areas.
- OpenClaw+ naming preserved for architecture layer.

Updated Percentage

- Gateway / Agent Hub implementation readiness increased (code integration and compile/test proof complete).
- Overall remains PARTIAL GO until production rollout + owner-auth visual proof + remaining external blockers.

Commits

- Pending in working tree at this phase report checkpoint.

Rollback

- Revert this integration by checking out prior commit for the changed files listed above.
- If needed after deployment, roll back by redeploying prior known-good commit hash.

Exact Next Step

1. Commit and push this integration batch.
2. Roll out updated build to production runtime.
3. Run owner-authenticated visual proof on Gateway/Agent Hub path.
