Day 76 â Pi + Dispatcher Integration Closeout

Status: developer-side closed

Blocker class: NONE

Generated: 2026-05-12T01:42:00Z

Lane: Pi advisory dispatcher

Scope

Day 76 wires Pi into the Gateway dispatcher surface as an advisory-only route optimizer. Pi remains a Dispatcher / Route Optimizer Candidate. Agent Zero remains commander. Pi cannot execute, write, call tools, bypass Gateway, replace Agent Zero, replace Hermes, replace Paperclip, replace SpaceAgent, or replace OpenClaw+.

What Was Implemented

- Added protected Gateway endpoint '/api/gateway/dispatcher/pi'.
- 'GET /api/gateway/dispatcher/pi' returns the canonical Pi shadow dispatcher status from the existing Pi truth source.
- 'POST /api/gateway/dispatcher/pi' returns a route recommendation and audit event without executing or writing.
- Extended the Pi proof packet route pointer so Gateway dispatcher proofs can point at '/api/gateway/dispatcher/pi'.
- Hardened Pi owner-input sanitization to redact '/Users/<owner>/...' paths in addition to existing local path and secret-like redaction.
- Preserved Pi's existing advisory-only model and did not broaden connector execution.

Files Changed

- 'src/app/api/gateway/dispatcher/pi/route.ts'
- 'src/app/api/gateway/dispatcher/pi/route.test.ts'
- 'src/lib/gateway-pi-dispatcher.ts'
- 'runtime/day-76-pi-dispatcher-integration-proof.json'
- 'runtime/day-76-pi-dispatcher-integration.md'
- 'runtime/day-76-pi-dispatcher-integration.pdf'

Routes Changed

- Added '/api/gateway/dispatcher/pi'.

UI Behavior

No designer UI or mock HTML/CSS/class names were modified. This is backend dispatcher truth only. Gateway and Agent Hub can consume this endpoint to show Pi as advisory-only, not as a live executor.

Service / Runtime Behavior

Runtime proof was performed against a local standalone Mission Control server on '127.0.0.1:3337' with an in-process proof API key. No '.env' file was changed and no key value was printed.

Proof checks passed:

- status returns 'mode: pi_dispatcher_shadow_status'
- Pi authority is 'advisory_only'
- Pi commander is 'false'
- Pi does not replace Agent Zero
- SpaceAgent recommendation for web research
- Hermes recommendation for workflow design while preserving Agent Zero authority
- Unknown connector blocks with 'unknown_connector_not_registered'
- Build-Wiki Run Now remains non-executing and gated
- '/Users/...' and secret-like owner input are redacted

Proof artifact: 'runtime/day-76-pi-dispatcher-integration-proof.json'

Tests Run

- 'git diff --check' â PASS
- 'pnpm run typecheck' â PASS
- 'pnpm run build' â PASS; route list includes '/api/gateway/dispatcher/pi'

- 'pnpm exec vitest run src/app/api/gateway/dispatcher/pi/route.test.ts src/lib/gateway-pi-dispatcher.test.ts' â PASS, 15 tests
- 'pnpm test' â PASS, 198 files / 1480 tests
- 'node scripts/protected-route-smoke-contract.mjs http://127.0.0.1:3337' â PASS, 41 routes checked
- 'node scripts/check-protected-file-invariants.mjs' â PASS
- 'node scripts/secret-scan-contract.mjs' â PASS
- 'node scripts/raw-exposure-scan-contract.mjs' â PASS
- '.env' diff check â PASS, no output

Deploy / Restart / Smoke Result

No production deploy or restart was claimed in this day. A short-lived local standalone proof server was started and stopped. No listener remained on port 3337 after proof.

Security Notes

- No '.env' edits.
- No secrets printed.
- No raw paths exposed in Pi proof output.
- No auth weakening.
- No external writes.
- No Zapier writes.
- No SMB/Fork 2.
- No fake Done/GO wording added.

Rollback Command

'git revert <day-76-pi-dispatcher-commit>'

Commit / Push

Pending at report creation. Exact files will be staged only after this report and PDF are generated.

Next Day Started

After commit and push, Day 77 starts: Paperclip + Bridge integration.
