

Day 06 Phase 4 â Telegram PDF Live Attachment Proof

Objective

Move Telegram report delivery from implemented/gated to live attachment proof when Bridge Session and connector conditions are satisfied.

Result

GATED / BLOCKED (honest, no fake send).

Actions Executed

1. Attempted Telegram bridge route access on active runtime:
 - 'GET /api/bridge/agent-zero/telegram/status'
 - 'POST /api/bridge/agent-zero/telegram/upload-report'
2. Confirmed route protection behavior.
3. Did not attempt any unsafe bypass.

Evidence

- Both route calls returned '401 Unauthorized' without owner/session auth context:
- 'GET /api/bridge/agent-zero/telegram/status' -> '401'
- 'POST /api/bridge/agent-zero/telegram/upload-report' -> '401'

Interpretation

- Adapter routes exist (from Day 05 implementation),
- but live attachment proof cannot be completed in this phase because authenticated scoped execution is not yet available.

Blockers

- 'mission_control_api_key_not_seeded' (authenticated local smoke lane currently unavailable)
- 'active_bridge_session_required'
- 'owner_approval_pending'
- if connector/session remains absent at runtime after auth is restored: 'telegram_report_delivery_adapter_not_configured' (verify on next authenticated check)

Safety Confirmation

- No bot token printed.
- No raw local path exposed.
- No fake delivery claim.
- No external write occurred.

Files Changed

- 'runtime/day-06-phase-4-telegram-pdf-live-attachment-proof.md'
- 'runtime/day-06-phase-4-telegram-pdf-live-attachment-proof.pdf'

Services

- Mission Control runtime active on local-only bind.

Commits

- Pending (phase report only in working tree at this point).

Rollback

- Not applicable (no source mutation in this phase).

Updated Percentage

- Telegram delivery remains PARTIAL (implemented/gated), not GO.

Exact Next Step

After Bridge Session persistence migration is deployed and authenticated operator access is available, run one scoped owner-approved Telegram report attachment and verify audit + expiration gates.
