Day 06 Phase 6 â Drive / OneDrive Upload Adapter Path

Objective

Move Google Drive and OneDrive from vague blocked state to exact implemented/gated path with explicit blockers.

Result

PARTIAL PASS (implementation-path clarity improved; live upload still blocked).

Findings

Both provider routes already exist and are provider-specific:

- 'POST /api/bridge/agent-zero/google-drive/upload-report'
- 'POST /api/bridge/agent-zero/onedrive/upload-report'

Both routes are:

- auth-protected ('requireRole('operator')')
- Bridge-session-intended
- currently hard-blocked by adapter readiness logic

Code-Level Proof

1. Provider route separation is correctly implemented (no Drive/OneDrive mixing).
2. Delivery modules explicitly return blocked results with exact reasons:
 - Google Drive: 'google_drive_upload_connector_not_configured'
 - OneDrive: 'onedrive_upload_connector_not_configured'
3. Both modules enforce:
 - 'accepted_for_execution=false'
 - 'bridge_session_required=true'
 - 'owner_approval_required=true'
 - 'no_fake_done=true'
 - 'no_tokens_exposed=true'
4. No raw local path is returned by these adapters in blocked mode.

Why Live Upload Is Not GO Yet

- Upload connector flags are still intentionally false in current delivery adapters.
- OAuth/connector execution runner is not yet configured for verified upload.
- Bridge Session approved execution proof is still pending.

Blockers

- 'google_drive_upload_connector_not_configured'
- 'onedrive_upload_connector_not_configured'
- 'active_bridge_session_required'
- 'owner_approval_pending'

Owner Action Package (when adapters are switched to live mode)

1. Complete provider auth in approved environment (no token sharing in chat).
2. Open scoped Bridge Session for one upload action only.
3. Provide target folder name for each provider separately.
4. Codex verifies:
 - upload success response,
 - safe share link,
 - audit event,
 - out-of-scope action rejection.

Files Changed

- 'runtime/day-06-phase-6-drive-onedrive-upload-adapter-path.md'
- 'runtime/day-06-phase-6-drive-onedrive-upload-adapter-path.pdf'

Tests

- Existing delivery adapter unit tests remain in place.
- Day 06 targeted suite already passed for Bridge session/execution lanes.

No-Secrets Confirmation

- No OAuth token values printed.
- No credential files printed.
- No '.env' changes.

Updated Percentage

- Delivery path clarity improved; provider upload remains BLOCKED/GATED until real upload proof.

Exact Next Step

Proceed to Day 06 Phase 7 (AgentMail status/send path) and classify incoming/outgoing with exact Bridge and domain-gate behavior.
