

Phase 4 — Agent Zero to Hermes Collaboration Report

Generated: 2026-05-08T00:22:51Z

Result

****Status:**** PARTIAL / ROUTE AUTH BLOCKED

The Agent Zero to Hermes planning-only collaboration contract test passed, but production route execution was not completed because no owner/operator authenticated session is available to this non-interactive worker. Mission Control correctly rejects unauthenticated handoff attempts.

Collaboration Contract Proof

Check	Result
Test suite	src/lib/agent-zero-hermes-collaboration.test.ts
Test result	8 passed / 0 failed
Handoff mode	agent_zero_hermes_collaboration_protocol
Hermes response type	plan/spec/recommendation only
Execution enabled	false
Writes enabled	false
Loop guard covered	yes
Timeout guard covered	yes
Owner-safe output covered	yes

Production Route Auth Proof

Route	Auth	HTTP	Result
GET /api/bridge/agent-zero/hermes-handoff	no	401	Unauthorized
POST /api/bridge/agent-zero/hermes-handoff	no	401	Unauthorized

Live Handoff Decision

The production handoff route is present and protected. A live authenticated handoff still requires an owner/operator session or approved route credential. Because Phase 3 confirmed the independent Hermes live adapter is still blocked, this phase cannot be marked GO.

Guardrails Confirmed

- No external write was executed.
- No file write was performed by Agent Zero or Hermes.

- No Bridge Session was opened.
- No Telegram, AgentMail, Drive, OneDrive, Zapier, HeyGen, SMB/Fork 2, or farmer action occurred.
- No raw paths, tokens, auth files, or internal task IDs were included in owner-facing proof.
- OpenClaw+ naming remains the runtime/skills/agents layer.

Exact Blockers

- `owner\_operator\_authenticated\_route\_session\_required` for production POST route proof.
- `hermes\_safe\_live\_chat\_adapter\_not\_configured` for independent Hermes live chat.

Phase 4 Decision

Phase 4 remains ****PARTIAL GO**** at the contract/test level and ****BLOCKED**** for live production handoff until Hermes live chat and owner/operator authenticated route execution are both proven.
