Day 65 - Protected Route Smoke

Date: 2026-05-11

Lane: Runtime / deployment / security

Status: developer-side PASS

Blocker class: NONE for unauthenticated protected-route proof

Objective

Prove that protected Mission Control, Gateway, Agent Hub, Bridge, runtime health, and connector routes do not render owner-facing production surfaces to unauthenticated requests.

Scope

Added a reusable unauthenticated protected-route smoke contract and fixed Gateway compatibility route handling so it runs after session/proxy auth protection instead of using Next config redirects before the auth proxy.

Root Cause

Gateway compatibility redirects in 'next.config.js' ran before the auth proxy:

- '/gateway/agent-hub' redirected to '/gateway?tab=agent-hub'
- '/gateway/agent-hub/paperclip' redirected to '/gateway?tab=paperclip'
- '/gateway/bridge-session' redirected to '/gateway?tab=bridge'
- '/gateway/dispatcher' redirected to '/gateway?tab=dispatcher'
- '/gateway/token-governor' redirected to '/gateway?tab=governor'

Unauthenticated requests still ended at a protected Gateway surface, but the first hop was not the login gate. Day 65 treats that as a protection defect because owner-facing compatibility routes must not route internally before authentication.

Files Changed

- 'next.config.js'
- 'src/proxy.ts'
- 'src/proxy.test.ts'
- 'src/lib/gateway-native-frame-decision.test.ts'
- 'src/lib/protected-route-smoke-contract.test.ts'
- 'scripts/protected-route-smoke-contract.mjs'
- 'runtime/day-65-protected-route-smoke.json'
- 'runtime/day-65-protected-route-smoke.md'
- 'runtime/day-65-protected-route-smoke.pdf'

Routes Changed

Gateway leaf compatibility redirects were moved from 'next.config.js' into the auth proxy after session/proxy auth is accepted:

- '/gateway/routes' -> '/gateway?tab=routes'
- '/gateway/registry' -> '/gateway?tab=registry'
- '/gateway/policies' -> '/gateway?tab=policies'
- '/gateway/health' -> '/gateway?tab=health'
- '/gateway/dispatcher' -> '/gateway?tab=dispatcher'
- '/gateway/token-governor' -> '/gateway?tab=governor'
- '/gateway/agent-hub' -> '/gateway?tab=agent-hub'
- '/gateway/agent-hub/paperclip' -> '/gateway?tab=paperclip'
- '/gateway/agent-hub/*' -> '/gateway?tab=agent-hub'
- '/gateway/bridge-session' -> '/gateway?tab=bridge'
- '/gateway/node-detail' -> '/gateway?tab=node-detail'
- '/gateway/mobile-tablet' -> '/gateway?tab=mobile'

Unauthenticated requests to these routes now redirect to 'login' before any internal Gateway tab redirect.

UI Behavior

No designer mock HTML, CSS, or class names were modified.

Authenticated Gateway compatibility routes still route into the single accepted Gateway shell and raw designer iframe assets. Unauthenticated owners/users get the login gate first.

Live Smoke Proof

Command:

```
""bash
node scripts/protected-route-smoke-contract.mjs http://127.0.0.1:3337 > runtime/day-65-protected
-route-smoke.json
""
```

Result summary:

- 'ok: true'
- Routes checked: '40'
- Protected pages checked: '20'
- Protected APIs checked: '16'
- Public routes checked: '4'
- Failures: '0'

The smoke sends:

- no auth headers
- no cookies
- no API key
- no response bodies to the report artifact

Tests / Checks

Fresh validation required before commit:

- 'git diff --check'
- 'pnpm test src/lib/protected-route-smoke-contract.test.ts src/proxy.test.ts src/lib/gateway-native-frame-decision.test.ts'
- 'pnpm run typecheck'
- 'pnpm run build'
- 'pnpm test'
- 'node scripts/check-protected-file-invariants.mjs'
- staged secret scan
- '.env' diff check

Deploy / Restart / Smoke

Mission Control standalone was rebuilt and restarted locally on '127.0.0.1:3337'.

Runtime proof PID:

- Listener PID: '86339'

Rollback

Use:

```
""bash
git revert <day-65-protected-route-smoke-commit-sha>
MC_HOSTNAME=127.0.0.1 PORT=3337 bash scripts/start-standalone.sh
```

““

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure added.
- No external writes.
- No fake route protection claim.
- No designer mock rewrites.

Next Day

Day 66 starts automatically after commit and push: Authenticated Route Smoke 100% Closure.
