Executive Result

AgentMail is **PARTIAL GO** as a registered, policy-gated delivery adapter. Gateway can see the AgentMail integration node and Agent Zero execution gateway lists the agentmail.send adapter. A send attempt without Bridge Session was blocked with no email sent.

Production Route Evidence

Check	Result
---	---
Gateway node integration_agentmail	200, read_only
Legacy /api/gateway/nodes/agentmail alias	404
Execution gateway registry	200
AgentMail adapter visible	yes
Execution enabled	false
Writes enabled	false
Send attempt without Bridge Session	423 blocked
Send blocker	active_bridge_session_required
Unauthenticated execute route	401

Delivery Policy

Rule	Status
---	---
AgentMail cannot send without Bridge Session	pass
AgentMail must use registered adapter	pass
AgentMail cannot fake done	pass
Domain/recipient allow-list required	policy present, not live-send tested
No email sent in this phase	pass

Remaining Blockers

Blocker	Impact	Exact Next Step
---	---	---
active_bridge_session_required	No outgoing send can be marked live.	Open scoped Bridge Session and test only an approved-domain recipient if owner authorizes.
live AgentMail connector not send-proven	Cannot claim outgoing delivery GO.	Verify connector credentials and adapter invocation through Bridge Session without exposing secrets.
node alias missing	/api/gateway/nodes/agentmail is not available.	Add compatibility alias from agentmail to integration_agentmail if desired.

Security Confirmation

- No email was sent.
- No external write occurred.
- No credentials or auth files were printed.
- No .env changes were made.
- Unauthenticated execution route returned 401.

Completion Estimate

Component	Percent	Status
---	---:	---
Gateway visibility	75%	node exists as integration_agentmail
Adapter registry	85%	agentmail.send visible
Blocked-send behavior	90%	blocked correctly without session
Live outgoing send	0%	not run
Incoming proof	0%	not proven in this slice
AgentMail overall	48%	PARTIAL GO

Final Decision

AgentMail: **PARTIAL GO**.

The adapter is registered and safely blocked. Live send/receive remains unproven until scoped Bridge Session and connector proof exist.
