

Phase 6 — Agent Zero to Hermes Collaboration Proof

Generated: 2026-05-07T22:45:41Z

Result

Status: PARTIAL / CONTRACT ROUTE WORKS, LIVE HERMES STILL BLOCKED

Live blocker: `hermes\_safe\_live\_chat\_adapter\_not\_configured`

Agent Zero can route a planning-only Hermes handoff through Mission Control, receive a workflow plan, keep execution disabled, and record the audit event. However, this is currently the Mission Control Hermes collaboration contract route (`mission\_control\_hermes\_contract`), not the blocked live Hermes chat adapter from Phase 5. I am not promoting Hermes to live GO from this result.

Collaboration Route Proof

Prompt:

`Design an email triage workflow. Do not execute.`

```
| Check | Result |
| --- | --- |
| Route | `POST /api/bridge/agent-zero/hermes-handoff` |
| HTTP status | 200 |
| Route status | `completed` |
| Task type | `workflow_plan` |
| `hermes_called` on collaboration route | true |
| Response source | `mission_control_hermes_contract` |
| Accepted for handoff | yes |
| Plan title | `Workflow plan for Design an email triage workflow. Do not execute.` |
| Plan step count | 4 |
| Plan execution enabled | no |
| Plan writes enabled | no |
| Route execution enabled | no |
| Route writes enabled | no |
| Raw IDs exposed to owner | no |
| Audit recorded | yes |
| Owner-safe response | `Hermes drafted the workflow plan plan for Agent Zero review. No execution occurred.` |
```

Live Hermes Adapter Cross-Check

```
| Check | Result |
| --- | --- |
```

```
| Route | `POST /api/bridge/hermes/test-chat` |
| HTTP status | 503 |
| `hermes_called` | false |
| Blocker | `hermes_safe_live_chat_adapter_not_configured` |
```

Security / Governance Confirmation

- No execution occurred.
- No file write occurred.
- No external write occurred.
- No email/send/upload occurred.
- No Zapier, HeyGen, SMB, Farmer, or broad connector action occurred.
- No secrets, tokens, auth files, or `.env` values were printed.
- No raw IDs were exposed in the owner-safe response.
- Agent Zero remains commander and final reviewer.
- Hermes remains lieutenant / workflow specialist, not commander.

Interpretation

This phase proves the **collaboration protocol** and audit path, but not live Hermes runtime chat. The correct status is:

- Agent Zero → Hermes planning route: **PARTIAL GO / contract route works**
- Hermes live adapter: **NO-GO LIVE**
- Agent Zero/Hermes live collaboration: **BLOCKED** until Hermes live adapter returns `hermes\_called:true` from a real safe adapter

Updated Percentages

```
| System | Previous | Current | Notes |
| --- | ---: | ---: | --- |
| Agent Zero / Hermes collaboration | 35% | 55% | Contract route/audit works; live Hermes adapter still blocked. |
| Hermes live readiness | 42% | 42% | No movement without live adapter. |
| Gateway orchestration | 74% | 76% | Handoff/audit protocol proven in production. |
```

Required Action

To finish this phase as live GO:

1. Configure a real safe no-tool/no-write Hermes adapter.
2. Restart Mission Control through approved admin authorization.

3. Confirm `POST /api/bridge/hermes/test-chat` returns `hermes_called:true`.

4. Re-run Agent Zero → Hermes handoff and verify the response comes from live Hermes, not only the contract route.

Phase 6 Decision

Phase 6 is **PARTIAL GO** for contract-level planning handoff, but **blocked for live Hermes collaboration** by `hermes_safe_live_chat_adapter_not_configured`.
