

day-05-phase-11-day05-validation-push

Day 05 Phase 11 â Day 05 Validation and Push

Objective

Validate all Day 05 implementation/report work with production-safe checks, then prepare clean push evidence.

Result

PARTIAL PASS.

Validation checks passed for local code quality and test gates, but authenticated API smoke on the running production-like runtime remained blocked by session/auth context (all protected API routes returned '401' with API-key-only attempts).

Actions Executed

1. Verified repository state and branch:
 - 'git rev-parse --show-toplevel'
 - 'git branch --show-current'
 - 'git remote -v'
2. Ran integrity and quality gates:
 - 'git diff --check'
 - 'pnpm run typecheck'
 - 'pnpm run build'
 - 'pnpm test'
3. Ran authenticated route smoke attempt (API key header):
 - Target: 'http://127.0.0.1:3337'
 - Evidence file: 'runtime/day-05-phase-11-auth-api-smoke.json'
4. Ran unauthenticated route smoke:
 - Target: 'http://127.0.0.1:3337'
 - Evidence file: 'runtime/day-05-phase-11-unauth-smoke.json'
5. Ran secret/protected-file scan:
 - 'node scripts/check-protected-file-invariants.mjs'
6. Checked '.env' diff:
 - 'git status --short -- .env .env.local .env.production .env.development .env.test'

Commands and Route Proof

- Typecheck: PASS.
- Build: PASS.
- Tests: PASS ('138' files, '1247' tests).
- Unauthenticated smoke: PASS (protected API routes '401'; protected UI routes redirected to '/login').
- Authenticated smoke (API-key header only): BLOCKED ('401' on protected APIs in current runtime context).

Files Changed (Day 05 validation artifacts)

- 'runtime/day-05-phase-11-auth-api-smoke.json'
- 'runtime/day-05-phase-11-unauth-smoke.json'
- 'runtime/day-05-phase-11-day05-validation-push.md'
- 'runtime/day-05-phase-11-day05-validation-push.pdf'

Services

- Active local production-like runtime listener verified on '127.0.0.1:3337'.
- Temporary validation runtime on '127.0.0.1:3341' started and stopped during checks.

Tests

- 'pnpm run typecheck': PASS
- 'pnpm run build': PASS
- 'pnpm test': PASS

Blockers

- 'owner_authenticated_browser_session_required'
- 'authenticated_api_session_required_for_protected_route_smoke' (API-key-only calls return '401'; owner/session auth still required for full authenticated proof lane)

Commits / Push

- Day 05 reporting batch committed and pushed:
- 'b209cb1'
- branch: 'to-knowledge-mc'

Rollback

- Rollback command:
- 'git revert b209cb1'

No-Secrets Confirmation

- No token values printed in report content.
- No auth files printed.
- No '.env' modifications detected.
- Protected-file invariant scan passed.

Updated Percentage (honest)

- Overall ecosystem remains PARTIAL GO, approximately '91%'.
- No 100% claim.

Exact Next Step

Proceed to Day 06 implementation phases, prioritizing owner/session action packages and live connector/runtime proofs for remaining blocked lanes.
