

Day 75 - Hermes + Dispatcher Integration

Status: DEVELOPER-SIDE CLOSED

Blocker class: BLOCKED

Blocker: hermes_safe_live_chat_adapter_not_configured

Started from commit: 5e60b89

Runtime proof base: <http://127.0.0.1:3337>

Proof artifact: runtime/day-75-hermes-dispatcher-integration-proof.json

Lane

Day 75 closes the Hermes + Dispatcher integration work package at developer-side scope. Hermes is now visible through a protected Gateway dispatcher endpoint as Agent Zero's lieutenant for skill and workflow design. This work does not claim Hermes live chat is proven. The endpoint is intentionally truthful: Hermes live adapter remains blocked until a safe no-tool/no-write adapter is configured and proven.

What Was Implemented

- Added a Gateway dispatcher planner for Hermes.
- Added protected endpoint 'GET /api/gateway/dispatcher/hermes' for Hermes dispatcher status.
- Added protected endpoint 'POST /api/gateway/dispatcher/hermes' for safe route planning from an owner request.
- Added structured audit-event output: 'hermes.dispatcher.route_planned'.
- Confirmed workflow/skill design routes to Hermes through Agent Zero.
- Confirmed non-Hermes requests do not pretend Hermes handled them.
- Confirmed 'hermes_called:false' until a safe Hermes live adapter is actually proven.
- Confirmed execution, writes, and external writes stay disabled.

Files Changed

- 'src/lib/gateway-hermes-dispatcher.ts'
- 'src/lib/gateway-hermes-dispatcher.test.ts'
- 'src/app/api/gateway/dispatcher/hermes/route.ts'
- 'src/app/api/gateway/dispatcher/hermes/route.test.ts'
- 'runtime/day-75-hermes-dispatcher-integration-proof.json'
- 'runtime/day-75-hermes-dispatcher-integration.md'
- 'runtime/day-75-hermes-dispatcher-integration.pdf'

Routes / Endpoints Changed

- Added 'GET /api/gateway/dispatcher/hermes'
- Added 'POST /api/gateway/dispatcher/hermes'

Both routes require viewer authentication through existing 'requireRole' policy.

UI Behavior

No Mission Control or Gateway designer HTML/CSS/class names were changed. No Gateway visual redesign occurred in this day. The new endpoint gives Gateway, Agent Hub, and future dispatcher UI a truthful Hermes status and route-plan source.

Service / Runtime Behavior

A fresh standalone Mission Control runtime was started at '127.0.0.1:3337' from the current build.

Runtime proof confirmed:

- Hermes is not commander.
- Agent Zero remains final commander.
- Hermes is selected for workflow/skill design route plans.
- Normal commander questions stay routed to Agent Zero and do not claim Hermes handled them.
- Hermes live adapter status is 'blocked_safe_live_chat_adapter_not_configured'.
- 'hermes_called:false'.
- 'execution_enabled:false'.
- 'writes_enabled:false'.
- 'external_writes_enabled:false'.
- 'dispatch_executed:false'.
- Audit event is emitted as data, not as a write side effect.
- Synthetic secret/path probe returned safe redacted output.

Tests / Checks Run

- 'git diff --check' - PASS
- 'pnpm run typecheck' - PASS
- 'pnpm run build' - PASS
- 'pnpm exec vitest run src/lib/gateway-hermes-dispatcher.test.ts src/app/api/gateway/dispatcher/hermes/route.test.ts' - PASS, 2 files / 6 tests
- 'pnpm test' - PASS, 197 files / 1474 tests
- 'MISSION_CONTROL_BASE_URL=http://127.0.0.1:3337 node scripts/protected-route-smoke-contract.mjs' - PASS, 41 routes checked
- 'node scripts/check-protected-file-invariants.mjs' - PASS
- 'node scripts/secret-scan-contract.mjs' - PASS
- 'node scripts/raw-exposure-scan-contract.mjs' - PASS
- '.env' status/diff check - PASS, no changes

Safety Confirmation

- No '.env' changes.
- No secrets printed.
- No auth weakening.
- No public local exposure added.
- No external writes.
- No Zapier writes.
- No SMB/Fork 2.
- No Bridge Session bypass.
- No fake Hermes live status.
- No fake Done / fake GO / fake live execution.
- Agent Zero remains commander.

Deploy / Restart / Smoke Result

Local standalone proof runtime was restarted safely on '127.0.0.1:3337' with PID recorded during proof as 89431. This was a local proof runtime, not a public exposure. Production restart/deploy is not claimed in this Day75 report.

Rollback Command

After commit:

```
""bash
git revert <day_75_commit_sha>
""
```

Commit / Push

Pending at report creation. To be filled by git history after commit and push.

Next Day Started

Day 76 - Pi + Dispatcher Integration starts next. The Day76 objective is to expose Pi advisory dispatcher output through Gateway with truthful advisory-only status and no execution authority.
