

Day 03 Phase 3 — Bridge Session Approved Execution

Objective

Move Bridge Session from lifecycle visibility to one approved scoped execution proof.

Actions

1. Checked Bridge Session status and policy state.
2. Executed one safe scoped action attempt (`agent\_zero.report.create`) through Bridge execution route.
3. Reviewed response contract for approval status, execution acceptance, and audit metadata.
4. Confirmed no out-of-scope or unauthorized execution occurred.

Commands / Routes Used

- `GET /api/bridge/agent-zero/bridge-session`
- `POST /api/bridge/agent-zero/execute` (safe scoped action attempt)

Proof

- Bridge Session status route returned `200` with approval-required posture.
- Safe execution attempt returned `423` with:
 - `accepted\_for\_execution: false`
 - `status: pending\_approval`
 - `blocked\_reason: owner\_approval\_pending`
 - `no\_fake\_done: true`
- Session audit payload metadata confirms the action was blocked rather than silently executed.

Files Changed

- `runtime/day-03-phase-3-bridge-session-approved-execution.md`

Services

- Mission Control bridge routes remain active.

Tests

- Bridge execution gating test: PASS (correctly blocked without owner approval).

Commits

- None in this phase.

Blockers

- `active\_bridge\_session\_required`
- `owner\_approval\_pending`

Rollback

- No code/config changes were applied.

No-Secrets Confirmation

- No secret values were printed.

Updated Percentage

- Bridge Session remains PARTIAL GO (gating proven; approved execution still pending).

Exact Next Step

- Open owner-approved Bridge Session with explicit scope and re-run one safe action to completion with audit trail and expiry proof.
