

Day 03 Phase 5 — Telegram PDF Attachment Adapter Path

Objective

Resolve Telegram document attachment blocker as far as safely possible.

Actions

1. Inspected current Telegram owner-route behavior and approval preview endpoint.
2. Verified Agent Zero remains the active command route and Tony remains archive-only in current control model.
3. Verified that a preview/approval contract exists but no approved document-send execution path is active.
4. Confirmed no attachment claim is made without execution proof.

Commands / Routes Used

- ``GET /api/bridge/telegram-approval-preview``
- Delivery manifest checks via ``POST /api/bridge/agent-zero/reports``

Proof

- Telegram preview endpoint returns read-only preview contract, not live document send.
- Delivery manifest for report generation marks Telegram as blocked:
- ``no_approved_telegram_document_attachment_route``
- No fake attachment confirmation was emitted.

Files Changed

- ``runtime/day-03-phase-5-telegram-pdf-attachment-adapter.md``

Services

- Telegram preview route: active.
- Telegram attachment execution route: not approved/not configured.

Tests

- Contract check: PASS (truthful blocked behavior).

Commits

- None in this phase.

Blockers

- ``no_approved_telegram_document_attachment_route``

Rollback

- No code/config changes in this phase.

No-Secrets Confirmation

- Bot token and auth material were not printed.

Updated Percentage

- Telegram delivery remains BLOCKED for PDF attachments.

Exact Next Step

- Implement and approve a scoped Telegram document-send adapter path with audit logging and Bridge Session gating, then run one live attachment proof.
