

Day 03 Phase 7 — YouTube Transcript Adapter

Objective

Move YouTube from vague limited status to exact adapter truth or proof.

Actions

1. Reviewed current SpaceAgent YouTube capability behavior and prior production packet outputs.
2. Confirmed metadata-only/limited behavior exists but transcript-backed claim extraction is not production-proven.
3. Confirmed no bypass patterns are used (no login bypass, no age/region bypass, no paywall bypass).
4. Classified implementation path as LIMITED pending explicit transcript connector proof.

Commands / Routes Used

- SpaceAgent YouTube path review from existing production request/packet behavior.
- Capability and blocker verification through Gateway/SpaceAgent status evidence.

Proof

- Current state remains limited:
- `youtube\_transcript\_connector\_not\_proven`
- Prior responses can return a packet shell, but transcript-backed claims/timestamps are not yet consistently proven through a dedicated connector route.
 - No full video downloads were performed.

Files Changed

- `runtime/day-03-phase-7-youtube-transcript-adapter.md`

Services

- SpaceAgent route remains active.
- Dedicated transcript connector proof remains incomplete.

Tests

- Adapter truth check: PASS (limited state is explicit, not misrepresented as GO).

Commits

- None in this phase.

Blockers

- `youtube\_transcript\_connector\_not\_proven`

Rollback

- No code/config changes in this phase.

No-Secrets Confirmation

- No credentials, cookies, or auth files were printed.

Updated Percentage

- YouTube remains PARTIAL / LIMITED.

Exact Next Step

- Implement or wire a production transcript-capable adapter path and run one public transcript-enabled video smoke returning claims with timestamps.
