

Day 2 Phase 011 - Hermes Runtime And Service Audit

Generated: 2026-05-07 23:05 EDT

Result: PARTIAL GO - runtime active, live chat adapter still blocked

Objective

Verify the real Hermes runtime state without printing credentials or assuming live chat access.

Actions Completed

- Confirmed hermes-gateway.service is active and running.
- Confirmed Hermes version is visible without printing credentials.
- Confirmed Mission Control authenticated Hermes status route returns 200.
- Confirmed unauthenticated Hermes routes return 401.
- Checked Hermes gateway credential sources as yes/no only; no value was printed.

Files Changed

No production source files changed in this phase. Report artifacts only.

Commands And Routes Used

- `systemctl --user show hermes-gateway.service -p ActiveState -p SubState -p MainPID -p ActiveEnterTimestamp`
- Hermes version check with output sanitized for owner-facing reporting.
- `GET /api/bridge/hermes/status` authenticated.
- `GET /api/bridge/hermes/status` unauthenticated.

Proof

```
| Check | Result |
| --- | --- |
| Hermes service | active/running |
| Hermes version | v0.12.0 |
| Mission Control Hermes status route | 200 authenticated |
| Unauthenticated protection | 401 |
| Execution from status route | disabled |
| Writes from status route | disabled |
```

Blockers

Hermes live test-chat remains blocked by `hermes_safe_live_chat_adapter_not_configured`. A local Hermes HTTP chat adapter with safe credentials is not proven.

Tests

Focused auth test passed: gateway route authentication policy rejects unauthenticated routes. Hermes route smoke passed for status/auth boundary.

Services

mission-control.service active after Day 1 restart. hermes-gateway.service active. playwright-mcp.service active. No new public service exposure was introduced.

Commits

Starting Day 2 HEAD: 9f31233. Day 2 report commit pending at report generation time.

Rollback

Rollback for Day 2 report-only artifacts: revert the Day 2 documentation commit after it is created. No service configuration rollback is required because no service settings were changed.

No-Secrets Confirmation

No credential values, auth files, API keys, tokens, passwords, or environment values were printed or committed. Environment and credential checks were boolean-only. No .env file was changed.

Updated Percentage

Hermes: 62% PARTIAL / service visible; live adapter NO-GO

Exact Next Step

Continue to Phase 012: determine whether a safe no-tool/no-write live chat adapter can be configured without new secrets or .env changes.
