

Day 2 Phase 012 - Hermes Safe Live Adapter

Generated: 2026-05-07 23:05 EDT

Result: NO-GO LIVE - blocker preserved honestly

Objective

Attempt to move Hermes live chat from blocked to proven only if a safe local no-tool/no-write adapter and credential path exists.

Actions Completed

- Inspected Mission Control Hermes test-chat implementation.
- Confirmed the current send function intentionally returns the safe blocker instead of calling Hermes live chat.
- Checked local Hermes service auth and API availability without printing secret values.
- Confirmed the local port observed for the OpenClaw+ gateway is not a proven Hermes live chat adapter.
- Did not modify .env and did not add any unsafe adapter.

Files Changed

No production source files changed in this phase. Report artifacts only.

Commands And Routes Used

- POST /api/bridge/hermes/test-chat authenticated with safe prompts.
- POST /api/bridge/hermes/test-chat unauthenticated.
- Local service and credential checks were boolean-only.

Proof

Prompt HTTP hermes_called Blocker Execution Writes
--- --- --- --- --- ---
Who is commander? 503 false hermes_safe_live_chat_adapter_not_configured false false
What is your role? 503 false hermes_safe_live_chat_adapter_not_configured false false
Can you execute protected actions? 503 false hermes_safe_live_chat_adapter_not_configured false false
What can you see through Gateway? 503 false hermes_safe_live_chat_adapter_not_configured false false

Blockers

hermes_safe_live_chat_adapter_not_configured. No approved local Hermes live chat credential/interface was proven. This prevents a truthful hermes_called:true for /api/bridge/hermes/test-chat.

Tests

src/lib/hermes-bridge.test.ts passed as part of the focused Day 2 test run. The tests confirm the guardrail behavior and no fake success.

Services

mission-control.service active after Day 1 restart. hermes-gateway.service active. playwright-mcp.service active. No new public service exposure was introduced.

Commits

Starting Day 2 HEAD: 9f31233. Day 2 report commit pending at report generation time.

Rollback

Rollback for Day 2 report-only artifacts: revert the Day 2 documentation commit after it is created. No service configuration rollback is required because no service settings were changed.

No-Secrets Confirmation

No credential values, auth files, API keys, tokens, passwords, or environment values were printed or committed. Environment and credential checks were boolean-only. No .env file was changed.

Updated Percentage

Hermes live adapter: 42% NO-GO

Exact Next Step

Provide or configure an approved local Hermes live chat adapter credential path, then implement the no-tool/no-write call and rerun route smoke.
