

Day 2 Phase 016 - Pi Runtime Baseline

Generated: 2026-05-07 23:05 EDT

Result: PARTIAL GO / SHADOW - in-process dispatcher proven, standalone runtime not proven

Objective

Find whether Pi is installed, runnable, reachable, and visible without omitting it from the system table.

Actions Completed

- Searched for Pi-specific runtime/service evidence without printing secrets.
- Confirmed Mission Control has Pi dispatcher source and tests.
- Confirmed no standalone Pi service, CLI, RPC server, or public listener is proven.
- Confirmed Mission Control exposes Pi as an in-process shadow dispatcher.
- Confirmed Pi execution and writes are disabled.

Files Changed

No production source files changed in this phase. Report artifacts only.

Commands And Routes Used

- GET /api/bridge/pi/status authenticated.
- GET /api/gateway/nodes/pi authenticated.
- GET /api/bridge/pi/status unauthenticated.
- GET /api/gateway/nodes/pi unauthenticated.

Proof

```
| Runtime Mode | Observed |
| --- | --- |
| Standalone service | not proven |
| CLI mode | not proven |
| RPC/server mode | not proven |
| Mission Control SDK/in-process shadow | proven |
| Public exposure | false for Pi |
| Execution | disabled |
| Writes | disabled |
| Blocker | pi_runtime_session_not_proven |
```

Blockers

pi_runtime_session_not_proven remains for standalone/runtime session. This is not a failure of the shadow dispatcher; it is the honest boundary.

Tests

Pi dispatcher unit tests passed: 9 tests.

Services

mission-control.service active after Day 1 restart. hermes-gateway.service active. playwright-mcp.service active. No new public service exposure was introduced.

Commits

Starting Day 2 HEAD: 9f31233. Day 2 report commit pending at report generation time.

Rollback

Rollback for Day 2 report-only artifacts: revert the Day 2 documentation commit after it is created. No service configuration rollback is required because no service settings were changed.

No-Secrets Confirmation

No credential values, auth files, API keys, tokens, passwords, or environment values were printed or committed. Environment and credential checks were boolean-only. No .env file was changed.

Updated Percentage

Pi Dispatcher: 72% PARTIAL GO / SHADOW

Exact Next Step

Continue using Pi as shadow/advisory until a standalone runtime is installed and safely proven.
