

# Day 2 Phase 017 - Pi Local Shadow Session

Generated: 2026-05-07 23:05 EDT

Result: PARTIAL GO - route recommendation works in shadow mode

## Objective

Prove Pi can answer a dispatcher request without execution, writes, tools, or public exposure.

## Actions Completed

- Called Pi status route with an authenticated temporary admin session.
- Captured the built-in safe\_probe recommendation.
- Confirmed Pi recommends Agent Zero for a general owner command.
- Confirmed Pi cannot execute, write, call tools, or bypass Gateway.

## Files Changed

No production source files changed in this phase. Report artifacts only.

## Commands And Routes Used

- GET /api/bridge/pi/status authenticated.
- Focused Pi gauntlet test command for route recommendations.

## Proof

```
| Safe Probe Field | Result |
| --- | --- |
| mode | pi_dispatcher_shadow_recommendation |
| shadow_mode | true |
| recommended_agent | agent_zero |
| selected route | owner to Gateway to Agent Zero |
| policy_result | allowed |
| execution_enabled | false |
| writes_enabled | false |
```

## Blockers

Standalone Pi runtime remains unproven. Current proof is Mission Control in-process shadow mode only.

## Tests

Pi dispatcher tests passed and confirm route categories for web, Firecrawl, YouTube, Hermes, Paperclip, OpenClaw+, delivery, unknown connector, and auth bypass scenarios.

## Services

mission-control.service active after Day 1 restart. hermes-gateway.service active. playwright-mcp.service active. No new public service exposure was introduced.

## Commits

Starting Day 2 HEAD: 9f31233. Day 2 report commit pending at report generation time.

## Rollback

Rollback for Day 2 report-only artifacts: revert the Day 2 documentation commit after it is created. No service configuration rollback is required because no service settings were changed.

## No-Secrets Confirmation

No credential values, auth files, API keys, tokens, passwords, or environment values were printed or committed. Environment and credential checks were boolean-only. No .env file was changed.

## Updated Percentage

Pi shadow session: 74% PARTIAL GO

## Exact Next Step

Keep Pi panel and final reports at PARTIAL GO / SHADOW until standalone runtime proof exists.
