

Phase 15 - Pi Dispatcher Shadow Proof Report

Generated: 2026-05-07T21:13:15-04:00

Result

****PARTIAL GO / SHADOW DISPATCHER VERIFIED****

Pi is verified as a Mission Control / Gateway shadow dispatcher candidate. A separate live Pi runtime is not proven. Pi recommends routes only; it does not execute, override Gateway policy, or replace Agent Zero.

Pi Role

Item	State
Gateway node	pi-mono
Role	Dispatcher / Route Optimizer Candidate
Mode	shadow / advisory
Execution	disabled
Public exposure	none proven
Agent Zero authority	commander remains final
Gateway authority	policy authority remains final

Route Recommendation Coverage

Scenario	Result
Web research	recommends SpaceAgent
SpaceAgent route	recommends SpaceAgent
Hermes workflow route	recommends Hermes / Agent Zero review
Paperclip task route	recommends Paperclip as Workforce Control Plane
Delivery route	marks Bridge Session / connector requirements
Blocked connector route	blocks with exact reason
Mini-agent route	recommends scoped mini-agent only as proposal
Unknown tool request	blocks as unknown / not registered

Route Protection Smoke

Unauthenticated route checks after Mission Control restart:

Route	Result	Meaning
GET /api/gateway/nodes/pi-mono	401	protected

GET /api/gateway/pi/recommend	401	protected
GET /api/gateway/dispatcher/recommend	401	protected

Tests

Test	Result
src/lib/gateway-pi-dispatcher.test.ts	7 passed
src/lib/gateway-mini-agent-os.test.ts	8 passed
Combined focused tests	15 passed

Security Confirmation

- Pi did not execute any task.
- Pi did not create or activate mini-agents.
- Pi did not send, upload, write, mount SMB, run farmer, call Zapier, or generate HeyGen output.
- No secrets printed.
- No ``.env`` changes.
- Agent Zero remains commander.

Updated Percentage

System	Previous	Updated
Pi Dispatcher Candidate	62% PARTIAL shadow	68% PARTIAL GO shadow

Pi remains PARTIAL because a separate runtime/session is not installed or proven.

Exact Remaining Blockers

- ``pi_runtime_session_not_proven``
- ``owner_authenticated_pi_route_smoke_required``
- ``pi_execution_disabled_by_design``

Exact Next Step

Keep Pi in shadow mode, run owner-authenticated Gateway route smoke, and only promote Pi after a real runtime/session exists with audit and no execution rights.

Rollback

This phase changed only reports. Rollback command after commit:

```
`git revert <phase-15-commit>`
```
